

- However, if the wheel always stops in one position, attach a balance weight loosely to the marked spoke.

- Rotate the wheel $\frac{1}{4}$ turn, and see whether or not the wheel stops in this position. If it does, the correct balance weight is being used.
- If it does not, try other balance weights until the wheel stays in position when rotated $\frac{1}{4}$ turn.
- Rotate the wheel another $\frac{1}{4}$ turn and then another $\frac{1}{4}$ turn to see if the wheel is correctly balanced.
- Repeat the entire procedure as many times as necessary to achieve correct wheel balance, and then clamp on the balance weights firmly using pliers.
- Mount the wheel back onto the motorcycle (Pg. 67 or 68).

NOTES: 1. Balance weights are available from Kawasaki Dealers in 10, 20, and 30 gram sizes. An imbalance of less than 10 grams will not usually affect running stability.

2. When removing the tire from rim, mark valve stem location on tire so that it can be replaced in the same position.

3. When installing a new tire, make sure you go through the balancing procedure.

HEADLIGHT

The headlight beam is adjustable both horizontally and vertically. If not properly adjusted horizontally, the beam will point to one side rather than straight ahead. If adjusted too low vertically, neither low nor high beam will illuminate the road far enough ahead. If adjusted too high vertically, high beam will fail to illuminate the road close ahead, and low beam will blind oncoming drivers.

Horizontal Adjustment:

- Turn the small screw on the headlight rim in or out until the beam points straight ahead.

Vertical Adjustment:

- Loosen the headlight housing mounting bolts just enough so that the headlight can be moved.

- Move the headlight up or down by hand to where the vertical aim is correct.

- Tighten the headlight housing mounting bolts.

HORN

The horn contacts wear down after long use and will need to be adjusted from time to time. Turning out the adjusting screw compensates for contact wear. If satisfactory horn performance cannot be obtained by this adjustment when the rest of the electrical system is functioning properly, the horn must be replaced. It cannot be disassembled.

CAUTION: Do not turn the adjusting screw out too far since doing so will damage the horn spring and increase the horn current, possibly burning out the horn coil.

- Disconnect the brown lead from the horn, set the multimeter to the 12 ADC range, and connect an ammeter into the circuit in series. The + ammeter lead goes to the brown lead, and the - ammeter lead goes to the horn terminal.
