

Proofs Involving Congruent Triangles

First, let's analyze some proofs.

This is easy! All you have to do is explain in plain English what is going on in the proofs. We'll look at some examples first.

AE. 1.

Given: $\overline{AB} \cong \overline{DE}$, $\overline{AC} \cong \overline{DF}$, and $\angle A \cong \angle D$

Prove: $\triangle ABC \cong \triangle DEF$

Statements	Reasons
1. $\overline{AB} \cong \overline{DE}$	1. Given
2. $\overline{AC} \cong \overline{DF}$	2. Given
3. $\angle A \cong \angle D$	3. Given
4. $\triangle ABC \cong \triangle DEF$	4. SAS

AE. 2.

Given: $\overline{AB} \cong \overline{CD}$, $\overline{AD} \cong \overline{CB}$

Prove: $\triangle ABD \cong \triangle CBD$

Statements	Reasons
1. $\overline{AB} \cong \overline{CD}$	1. Given
2. $\overline{AD} \cong \overline{CB}$	2. Given
3. $\overline{BD} \cong \overline{BD}$	3. Reflexive property
4. $\triangle ABD \cong \triangle CBD$	4. SSS

AE. 3.

Given: $\overline{AE}$ Bisects $\overline{BD}$, $\angle B \cong \angle D$

Prove: $\triangle ABC \cong \triangle DEC$

Statements	Reasons
1. $\angle B \cong \angle D$	1. Given
2. $\overline{AC}$ Bisects $\overline{BD}$	2. Given
3. $\overline{BC} \cong \overline{DC}$	3. Definition of Bisect
4. $\angle ACB \cong \angle DCE$	4. Vertical angles
5. $\triangle ABC \cong \triangle DEC$	5. ASA

Analysis:

Working backward we must ask the key question, "How can we show that two triangles are congruent?" The answer? A triangle congruence theorem like SSS, SAS, ASA, AAS or HL. This gives us B1: $\triangle ABC \cong \triangle DEC$, by some property, but which one? To find out, start working forward. Listing all of the given information gives us a pair of angles $\angle B$ and $\angle D$ sandwiched between a pair of congruent sides $\overline{AB} \cong \overline{DE}$ and $\overline{AC} \cong \overline{CE}$. So this means we have $\triangle ABC \cong \triangle DEC$ by the SAS theorem which is B2: and the proof is complete.

Analysis:

Working backward, we must ask the key question, "How can we show that two triangles are congruent?" The answer? A triangle congruence theorem like SSS, SAS, ASA, AAS or HL. This gives us B1: $\triangle ABC \cong \triangle CBD$ by some property, but which one? Then start working forward. Listing all of the given information gives us two pairs of sides $\overline{AB} \cong \overline{CD}$ and $\overline{AD} \cong \overline{CB}$, but this is not enough. We need another pair of sides or an angle between them. Looking now at the diagram we have $\overline{BD} \cong \overline{BD}$ as a shared line. So this brings us to say $\triangle ABC \cong \triangle CBD$ by SSS which is B1 and the proof is complete.

Analysis:

Working backward we must ask the key question, "How can we show that two triangles are congruent?" The answer? A triangle congruence theorem like SSS, SAS, ASA, AAS or HL. This gives us B1: $\triangle ABC \cong \triangle DEC$ by some property, but which one? Then start working forward. Listing all of the given information gives us a pair of angles $\angle B$ and $\angle D$, and $\overline{BD}$ and $\overline{AE}$ bisects $\overline{BD}$. If $\overline{AE}$ bisects $\overline{BD}$ then $\overline{BD}$ is cut in half at C so $\overline{BC} \cong \overline{DC}$! This is not enough though. Looking at the diagram we see vertical angles $\angle ACB \cong \angle DCE$, which gives us $\triangle ABC \cong \triangle DEC$ by the property ASA. This is B1 and the proof is complete.

2010 Proofs Involving Congruent Triangles:

Modern Mathematics Dirk De Bock, 2023-03-08 The international New Math developments between about 1950 through 1980 are regarded by many mathematics educators and education historians as the most historically important development in curricula of the twentieth century It attracted the attention of local and international politicians of teachers and of parents and influenced the teaching and learning of mathematics at all levels kindergarten to college graduate in many nations After garnering much initial support it began to attract criticism But as Bill Jacob and the late Jerry Becker show in Chapter 17 some of the effects became entrenched This volume edited by Professor Dirk De Bock of Belgium provides an outstanding overview of the New Math modern mathematics movement Chapter authors provide exceptionally high quality analyses of the rise of the movement and of subsequent developments within a range of nations The first few chapters show how the initial leadership came from mathematicians in European nations and in the United States of America The background leaders in Europe were Caleb Gattegno and members of a mysterious group of mainly French pure mathematicians who since the 1930s had published under the name of a fictitious Nicolas Bourbaki In the United States there emerged during the 1950s various attempts to improve U S mathematics curricula and teaching especially in secondary schools and colleges This side of the story climaxed in 1957 when the Soviet Union succeeded in launching Sputnik the first satellite Undoubtedly this is a landmark publication in education The foreword was written by Professor Bob Moon one of a few other scholars to have written on the New Math from an international perspective The final epilogue chapter by Professor Geert Vanpaemel a historian draws together the overall thrust of the volume and makes links with the general history of curriculum development especially in science education including recent globalization trends **Asian Research in Mathematics Education** Bill Atweh, Lianghuo Fan, Catherine P. Vistro-Yu, 2023-05-17 This book focuses on the development of research in mathematics education cultures and its products from the perspective of local educators It consists of contributions from Mainland China Indonesia Korea Macao Singapore the Philippines and Turkey This book examines the development of the culture of research in the respective countries and also reviews the research conducted in the recent past in mathematics education It takes a critical stance through identifying the various accomplishments and identifying challenges for the future of research in terms of its diversification and quality Divided into two sections the first section considers factors around the development of a research culture in the respective countries by focusing on the means used to develop research expertise and quality The second section consists of overviews of the area of research and methodologies conducted in mathematics education in the various countries with the intention of highlighting the research topics conducted as well as discussing omissions of such research **Math Unlimited** R. Sujatha, H. N. Ramaswamy, C. S. Yogananda, 2011-11-11 This collection of essays spans pure and applied mathematics Readers interested in mathematical research and historical aspects of mathematics will appreciate the enlightening content of the material Highlighting the

Mathematical Software - ICMS 2010 Komei Fukuda, Joris van der Hoeven, Michael Joswig, Nobuki Takayama, 2010-08-30 The ICMS Developer's Meeting is an international congress for which the main theme is mathematical software The 2010 meeting was the third of a series of meetings of similar theme the first being held in Beijing China in 2002 and the second in Castro Urdiales Spain in 2006 The field of mathematics has numerous branches and in each branch we find that algorithms and also implementations and applications of software systems are studied Researchers who endeavor to make such studies also have international meetings within their specific branches of mathematics and these meetings have made significant contributions to the fields in which they lie The ICMS International Congress on Mathematical Software on the other hand is a general not branch specific meeting on mathematical software which is held every four years and is a rare opportunity for developers of mathematical software from different branches of mathematics as well as mathematicians who are interested in mathematical software to gather together

Teaching and Learning High School Mathematics Charlene E. Beckmann, Denise R. Thompson, Rheta N. Rubenstein, 2009-11-02 Too many high school students faced with mathematics in courses at the level of algebra and beyond find themselves struggling with abstract concepts and unwilling to pursue further study of mathematics When students curtail their course taking in mathematics they may be impacting their college and career options Thus high school mathematics teachers have the responsibility to help students recognize the value and importance of mathematics while also designing instruction that makes mathematics accessible to all students Ball and Bass 2000 as well as other mathematics educators have recognized that mathematics teachers not only need to know mathematics content and mathematics pedagogy i.e. teaching strategies but they also need to know how these ideas are integrated This mathematical knowledge for teaching is the knowledge that teachers of mathematics need and it differs from the knowledge that research or applied mathematicians must know This text is designed to provide teachers with insights into this mathematical knowledge for teaching Teaching and Learning High School Mathematics is likely different from many other texts that you have used It integrates both content and pedagogy to help you develop and build your own understanding of teaching The text is designed to help you develop deep conceptual understanding of fundamental mathematics Ma 1999 so that you are able to approach mathematics from multiple perspectives with many tools Such flexibility in teaching is essential if teachers are to help all students become mathematically proficient Throughout this book you are encouraged to work in cooperative teams This strategy is designed to help you develop a mathematics learning community and build a professional network that will be a valuable resource during your professional career Hopefully you will experience the benefits of

engaging in rich mathematical discussions with peers and consider how to encourage such learning environments in your own classrooms Lesson planning is another element pervasive throughout this text To help teachers plan for effective student centered lessons the Question Response Support QRS Guide is introduced in Lesson 1 1 and used throughout the remainder of the lessons The QRS Guide is a tool on which teachers may record tasks or questions Q for students expected and observed student responses R and teacher support S in the form of additional just enough questions to support students in their progress on the task In each unit teachers expand their repertoire of teaching and learning elements and strategies and incorporate these elements as they plan additional lesson segments In Unit 4 lesson planning is formally introduced as teachers put together elements from previous units into complete cohesive lesson plans

Revolutions of Geometry Michael L. O'Leary, 2010-02-22 Guides readers through the development of geometry and basic proof writing using a historical approach to the topic In an effort to fully appreciate the logic and structure of geometric proofs Revolutions of Geometry places proofs into the context of geometry's history helping readers to understand that proof writing is crucial to the job of a mathematician Written for students and educators of mathematics alike the book guides readers through the rich history and influential works from ancient times to the present behind the development of geometry As a result readers are successfully equipped with the necessary logic to develop a full understanding of geometric theorems Following a presentation of the geometry of ancient Egypt Babylon and China the author addresses mathematical philosophy and logic within the context of works by Thales Plato and Aristotle Next the mathematics of the classical Greeks is discussed incorporating the teachings of Pythagoras and his followers along with an

overview of lower level geometry using Euclid's Elements Subsequent chapters explore the work of Archimedes Viete's revolutionary contributions to algebra Descartes merging of algebra and geometry to solve the Pappus problem and Desargues development of projective geometry The author also supplies an excursion into non Euclidean geometry including the three hypotheses of Saccheri and Lambert and the near simultaneous discoveries of Lobachevski and Bolyai Finally modern geometry is addressed within the study of manifolds and elliptic geometry inspired by Riemann's work Poncelet's return to projective geometry and Klein's use of group theory to characterize different geometries The book promotes the belief that in order to learn how to write proofs one needs to read finished proofs studying both their logic and grammar Each chapter features a concise introduction to the presented topic and chapter sections conclude with exercises that are designed to reinforce the material and provide readers with ample practice in writing proofs In addition the overall presentation of topics in the book is in chronological order helping readers appreciate the relevance of geometry within the historical development of mathematics Well organized and clearly written *Revolutions of Geometry* is a valuable book for courses on modern geometry and the history of mathematics at the upper undergraduate level It is also a valuable reference for educators in the field of mathematics
