Data-Driven Techniques in Speech Synthesis R.I. Dampier, 2012-12-06 Data Driven Techniques in Speech Synthesis gives a first review of this new field All areas of speech synthesis from text are covered including text analysis letter to sound conversion prosodic marking and extraction of parameters to drive synthesis hardware Fuelled by cheap computer processing and memory the fields of machine learning in particular and artificial intelligence in general are increasingly exploiting approaches in which large databases act as implicit knowledge sources rather than explicit rules manually written by experts Speech synthesis is one application area where the new approach is proving powerfully effective the reliance upon fragile specialist knowledge having hindered its development in the past This book provides the first review of the new topic with contributions from leading international experts Data Driven Techniques in Speech Synthesis is at the leading edge of current research written by well respected experts in the field The text is concise and accessible and guides the reader through the new technology The book will primarily appeal to research engineers and scientists working in the area of speech synthesis However it will also be of interest to speech scientists and phoneticians as well as managers and project leaders in the telecommunications industry who need an appreciation of the capabilities and potential of modern speech synthesis technology
