Mark Ryan, Haynes, 1996 *Semiconductor Design and Implementation Issues in Integrated Vehicle Electronics* John H. Hall, 2005 This major research study provides a fresh critical look at the way automobile electronics are and should be built. Written by Silicon Valley pioneer John Hall, this book is based on his nearly 40 years of experience in developing and producing semiconductors for the automobile industry and other customers. Highly readable and comprehensible for even beginning students of electronics and semiconductor design, this volume provides an in-depth explanation of the factors to be considered when building vehicle systems. Starting with a concise history of vehicle electronics, Hall walks the reader through the environmental conditions faced by these systems and the variety of failure mechanisms that can occur. Basic and advanced semiconductor issues raised by vehicle implementation are then discussed in detail. A wide range of issues confronting designers, from over marketing of risky features to time and cost constraints, are explained. Complex electronic modules from many different manufacturers are examined and discussed as real world case studies of good and bad design techniques. Hall concludes by providing design recommendations that will allow vehicle electronics system developers to build much tougher devices at little or no incremental production cost. This book is the first major work to focus on key issues emerging as major causes of safety and performance problems. Vehicle makers increasingly seek market advantages by providing ever more capable electronics in their products. While these features add much value to vehicles, they fail in ways that are beyond the experience and comprehension of most technicians and accident investigators. By combining decades of design experience and innovation with extensive research, Hall has produced unique insights and explanations so engineers can prevent most or perhaps all of these problems. John Hall is one of Silicon Valley's most prolific independent pioneers and inventors. He founded Union Carbide's semiconductor operation in 1962. He is a founder of Interstil and Micro Power Systems. He is the inventor of the first electronic watch, first LCD digital watch, first CMOS liquid crystal display, hand-held calculator, color autofocus cameras, among many successful commercial products. He has worked for many American and foreign automakers on specific projects such as integrated two-way radios and seat belt interlocks. He is working with DoD on hardening electronics systems against non-nuclear events. **Forthcoming Books** Rose Arny, 2002 *The Cumulative Book Index*, 1997 A world list of books in the English language **Subject Guide to Children's Books in Print 1997** Bowker Editorial Staff, R R Bowker Publishing, 1996-09 **Mazda 626 and MX-6 Automotive Repair Manual** Larry Warren, John Harold Haynes, 1997-12 Mazda 626 FWD 1983-91 Shop Manual Haynes 253 pgs 607 ill *General Motors N-cars Automotive Repair Manual* Richard Lindwall, John Harold Haynes, 1995 GM N Cars 1985-95 Shop Manual Haynes 376 pgs 902 ill **Whitaker's Books in Print**, 1998 *Ford Aerostar Mini-vans Automotive Repair Manual* Larry Warren, Mark Christman, John Harold Haynes, 1996 Offers step by step procedures linked to hundreds of easy-to-follow photos
