manufacturing became a fundamental force behind America's economic, strategic and social dominance. He describes American manufacturing's rapid rise at the end of the 19th century, its consolidation and modernization between WW1 and WW2, its role as an enabler of mass consumption after 1945 and its decline. Some economists argue that shipping low value jobs overseas matters little because the high value work remains in the United States. But asks Smil, do we want a society that consists of a small population of workers doing high value added work and masses of unemployed? Smil assesses various suggestions for solving America's manufacturing crisis, including lowering corporate tax rates, promoting research and development, and improving public education. Will America act to preserve and reinvigorate its manufacturing? It is crucial to our social and economic well being, but Smil warns the odds are no better than even.
