Mathematical Analysis, its Applications and Computation

Paula Cerejeiras,Michael Reissig,2022-05-11 This volume includes the main contributions by the plenary speakers from the ISAAC congress held in Aveiro Portugal in 2019 It is the purpose of ISAAC to promote analysis its applications and its interaction with computation Analysis is understood here in the broad sense of the word including differential equations integral equations functional analysis and function theory With this objective ISAAC organizes international Congresses for the presentation and discussion of research on analysis The plenary lectures in the present volume authored by eminent specialists are devoted to some exciting recent developments in topics such as science data interpolating and sampling theory inverse problems and harmonic analysis *Gaussian Processes for Positioning Using Radio Signal Strength Measurements* Yuxin Zhao,2019-02-27 Estimation of unknown parameters is considered as one of the major research areas in statistical signal processing In the most recent decades approaches in estimation theory have become more and more attractive in practical applications Examples of such applications may include but are not limited to positioning using various measurable radio signals in indoor environments self navigation for autonomous cars image processing radar tracking and so on One issue that is usually encountered when solving an estimation problem is to identify a good system model which may have great impacts on the estimation performance In this thesis we are interested in studying estimation problems particularly in inferring the unknown positions from noisy radio signal measurements In addition the modeling of the system is studied by investigating the relationship between positions and radio signal strength measurements One of the main contributions of this thesis is to propose a novel indoor positioning

framework based on proximity measurements which are obtained by quantizing the received signal strength measurements. Sequential Monte Carlo methods to be more specific particle filter and smoother are utilized for estimating unknown positions from proximity measurements. The Cramér-Rao bounds for proximity based positioning are further derived as a benchmark for the positioning accuracy in this framework. Secondly to improve the estimation performance Bayesian non parametric modeling namely Gaussian processes have been adopted to provide more accurate and flexible models for both dynamic motions and radio signal strength measurements. Then the Cramér-Rao bounds for Gaussian process based system models are derived and evaluated in an indoor positioning scenario. In addition we estimate the positions of stationary devices by comparing the individual signal strength measurements with a pre constructed fingerprinting database. The positioning accuracy is further compared to the case where a moving device is positioned using a time series of radio signal strength measurements. Moreover Gaussian processes have been applied to sports analytics where trajectory modeling for athletes is studied. The proposed framework can be further utilized to carry out for instance performance prediction and analysis health condition monitoring etc. Finally a grey box modeling is proposed to analyze the forces particularly in cross country skiing races by combining a deterministic kinetic model with Gaussian process.

Fundamental Approaches to Software Engineering Stefania Gnesi, Arend Rensink, 2014-03-21 This book constitutes the proceedings of the 17th International Conference on Fundamental Approaches to Software Engineering FASE 2014 held as part of the European Joint Conferences on Theory and Practice of Software ETAPS 2014 which took place in Grenoble France in April 2014. The 28 papers included in this volume together with one invited talk were carefully reviewed and selected from 125 submissions.
