Medicine and Religion in Enlightenment Europe Andrew Cunningham, 2017-03-02 The Enlightenment period here understood as covering the years 1650 to 1789 is usually considered to be a period when religion was obliged to give way to rationality With respect to medicine this means that the religious elements in the treatment and interpretation of diseases to all intents and purposes disappeared However there are growing indications in recent scholarship that this may well be an overstatement Indeed it appears that religion retained many of its customary relations with medicine This volume explores how far and the ways in which this was still the case It looks at this multi faceted relationship with respect to among others medical care and death in hospitals religious vocation and nursing chemical medicine and religion the clergy and medicine the continued significance of popular medicine faith healing dissection and religion and religious dissent and medical innovation Within these significant areas the volume provides a European perspective which will make it possible to draw comparisons and determine differences

[A Vindication of Phrenology](#) William Mattieu Williams, 1894. **Architecture and the Sciences** Antoine Picon, Alessandra Ponte, 2003-05. Since antiquity the sciences have served as a source of images and metaphors for architecture and have had a direct influence on the shaping of built space. In recent years architects have been looking again at science as a source of inspiration in the production of their designs and constructions. This volume evaluates the interconnections between the sciences and architecture from both historical and contemporary perspectives. *Architecture and the Sciences* shows how scientific paradigms have migrated to architecture through the appropriation of organic and mechanical models. Conversely, architecture has provided images for scientific and technological discourse. Accordingly, this volume investigates the status of the exchanges between the two domains. Contents include: Alessandra Ponte, Desert Testing; Martin Bressani, Violet le Duc's Optic; Georges Teyssot, Norm and Type Variations on a Theme; Reinhold Martin, Organicism's Other; Catherine Ingraham, Why All These Birds; Birds in the Sky; Birds in the Hand; Antoine Picon, Architecture Science Technology and the Virtual Realm; and Felicity Scott, Encounters with the Face of America.
