Anatomy of the Cat Jacob Reighard, 2016-10-06 ALTHOUGH the cat has long been in common use for the practical study of mammalian anatomy a clear correct not too voluminous account of its structure such as should be in the hands of students in the laboratory has remained a desideratum A number of works have been published on the cat some of them of much value yet there is none which fulfils exactly the conditions mentioned The books which have appeared on this subject are the following 1 Strauss Durckheim H *Anatomie descriptive et comparative du Chat* 2 vols Paris 1845 2 Mivart St George *The Cat an Introduction to the Study of Back boned Animals especially Mammals* New York 1881 3 Wilder Burt G and Gage Simon H *Anatomical Technology as applied to the Domestic Cat* New York 1882 4 Gorham F P and Tower R W *A Laboratory Guide for the Dissection of the Cat* New York 1895 5 Jayne H *Mammalian Anatomy Vol I* Philadelphia 1898 The first of these works treats only of the muscles and bones and is not available for American students Its excellent plates or Williams s outline reproductions of the same should be in every laboratory The second book named is written in such general terms that its descriptions are not readily applicable to the actual structures found in the dissection of the cat and experience has shown that it is not fitted for a laboratory handbook It contains in addition to a general account of the anatomy of the cat also a discussion of its embryology psychology palaeontology and classification
