

3 CELLS AND TISSUES

The basic unit of structure and function in the human body is the cell. Each of a cell's parts, or organelles, as well as the entire cell, is organized to perform a specific function. Cells have the ability to metabolize, grow and reproduce, move, and respond to stimuli. The cells of the body differ in shape, size, and in specific roles in the body. Cells that are similar in structure and function form tissues, which, in turn, construct the various body organs.

Student activities in this chapter include questions relating to the structure and function of the generalized animal cell and to the general arrangement of tissues and their contribution to the activities of the various body organs.

Developmental Biology of Flowering Plants V.

Raghavan,2012-12-06 The study of the development of flowering plants may be said to be in the throes of a revolution The literature on the subject is extensive and continues to grow rapidly as new discoveries pile one on top of the other moreover these striking advances in our knowledge have put plant developmental biology well ahead of other aspects of the study of plants This has come about after a period of neglect and stagnation in the field and has been triggered by the power of recombinant DNA technology to analyze genetic information and by a fruitful cross fertilization between physiology genetics and molecular biology Whereas considerations of developmental phenomena were at one time largely restricted to the structure and physiology of a wide selection of plants recent molecular and genetic approaches are focused on one or two model systems Notwithstanding the difficulty of having to relate developmental mechanisms in a few experimentally attractive models to the enormous range of plants the use of model systems has gained wide acceptance This book is intended to meet the need for a unified account of the general principles of development of flowering plants representing structural physiological biochemical genetic and molecular perspectives It arose out of the revision and upgrading of an undergraduate course in plant development that I have taught here at The Ohio State University for more than 20 years
