musculoskeletal diseases especially in the increasing population of elderly people Human movement is generated through a complex web of interactions between embedded physiological systems on different spatiotemporal scales ranging from the molecular to the organ level Much research is dedicated to the understanding of each of these systems using methods and modalities tailored for each scale Nevertheless combining knowledge from different perspectives opens new venues of scientific thinking and stimulates innovation Integration of this mosaic of multifaceted data across multiple scales and modalities requires further exploration of methods in simulations and visualization to obtain a comprehensive synthesis However this integrative approach cannot be achieved without a broad appreciation for the multiple research disciplines involved

Electromagnetic Fields in Biological Systems James C. Lin, 2016-04-19 Spanning static fields to terahertz waves this volume explores the range of consequences electromagnetic fields have on the human body Topics discussed include essential interactions and field coupling phenomena electric field interactions in cells focusing on ultrashort pulsed high intensity fields dosimetry or coupling of ELF fields into biological systems and the historical developments and recent trends in numerical dosimetry It also discusses mobile communication devices and the dosimetry of RF radiation into the human body exposure and dosimetry associated with MRI and spectroscopy and available data on the interaction of terahertz radiation with biological tissues cells organelles and molecules

Computational Models for the Human Body: Special Volume Nicholas, Philippe Ayache, 2004-07-16 Provides a better understanding of the physiological and mechanical behaviour of the human body and the design of tools for their realistic numerical simulations including concrete examples of such computational models This book covers a large range of methods and an illustrative set of applications
