

These two simple procedures, involving only 4 steps each, can be used to separate the two components. The first step is to add a small amount of water to the mixture, which will cause the solid to dissolve. The second step is to add a small amount of acid, which will cause the solid to precipitate. The third step is to filter the mixture, and the fourth step is to wash the solid with water. This procedure can be used to separate a mixture of two solids, such as a mixture of a solid and a liquid, or a mixture of two solids.
