

Animal Reproduction

Asexual vs. Sexual Reproduction

- All animals reproduce sexually, some can also reproduce asexually
- Asexual reproduction
 - Produces offspring that are genetically identical to parent
 - One individual can quickly produce large numbers of clones
 - Favored in stable/predictable environment
 - If parent is successful, then offspring will be as well
 - Is favored when colonizing new habitats because individual does not need to find a mate
- Sexual reproduction
- Produces offspring that are not genetically identical to parent or each other
- Increases genetic diversity
- Favored in unstable/unpredictable environment
 - Increased genetic variation gives offspring better chance of survival
- Disadvantage: must have both sexes present to reproduce

Types of Asexual Reproduction

- Binary Fission
 - Organism splits into two separate, equally sized organisms
 - Occurs in some invertebrate multicellular organisms
 - Corals, anemones
- Budding
 - Adult organism produces an outgrowth that eventually separates and grows into another separate, adult organism
 - Occurs in some invertebrates such as hydra
- Fragmentation
 - Occurs when part of the adult body is broken off and each part undergoes regeneration
 - Occurs in sea stars, flatworms, and poriferans (sponges)
- Parthenogenesis
 - Occurs when eggs are formed via mitosis and develop without fertilization
 - Occurs in invertebrates such as water fleas, bees, daphnia
 - Can also occur in vertebrates such as reptiles, amphibians, and fish

Sex Determination

- In mammals, XX = female and XY = male
 - Y determines sex of individual
 - Current research shows it is more complicated than simple X and Y
- In birds, the sex chromosomes are Z and W
 - ZZ = male, ZW = female
