Stress and Coping D M Pestonjee, 1992-03-02 Future historians may well label the second half of the twentieth century as the age of speed Certainly there has been an explosion of information in all areas of human activity and a rapid dissemination of knowledge The result has been a growth in expectations which has affected not only individuals but also larger groups like organisations And this in turn leads to stress

Even though stress is a much studied phenomenon it still tends to be defined in vague terms and is surrounded by confusion Professor Pestonjee defines stress as occurring when demands on an individual exceed his adjustment resources While stress is generally believed to have a deleterious effect of health and performance recent research has revealed that a minimal level of stress is essential for effective functioning It is the individual's reaction to stress which makes all the difference and may prove to be harmful Professor Pestonjee has divided his review of Indian research on the subject into three parts In the first section he discusses the concept of stress in relation to ancient Indian scriptures and demonstrates that stress is not just a modern phenomenon Subsequently he discusses stress related diseases like bronchial asthma anxiety neuroses and cancer The next section focuses on the different types of stress experienced by individuals in an organisational setting Available research on various professional groups such as nurses teachers women executives and policemen have been discussed in detail to describe the stress experienced by them The last section deals with coping styles or strategies adopted by individuals to deal with stress The author also examines the various personality and organisational variables which act as moderators of stress Since stress is inevitable the author has highlighted several techniques to counteract stress like yoga meditation and relaxation Dealing with a topic which is of great significance to individuals and organisations in the world today this compendium of research will be of immense interest to psychologists management experts trainers counsellors and research scholars

the true path to inner peace doesn't require a retreat from the world. Rather, she gives the reader powerful and practicable tools to face these global issues and improve both our planet and our personal lives. A glossary and an annotated list of readings are now included. Extensively updated throughout, the new edition features a new co-author, Mary Kite, and new chapters on qualitative research and content analysis and another on integrative literature reviews, including meta-analysis, critical techniques for today's research environment. A new chapter on exploratory and confirmatory factor analysis addresses the use of path analysis and structural equation modeling. A new chapter on how to write a research report using APA style. Examples from cross-cultural and multi-cultural research, neuroscience, cognitive and developmental psychology, along with ones from social, industrial, and clinical psychology. More on Internet research and studies. Greatly expanded Part 3 on research designs with chapters on true experiments, field research, correlational and single case designs, content analysis, and survey and qualitative research. A website with PowerPoint slides for each chapter, a test bank with short answer and multiple choice questions, additional teaching resources, and the tables and figures from the book for instructors, and chapter outlines, suggested readings, and links to related web sites for students. 18 Unconventional Essays on the Nature of Mathematics Reuben Hersh, 2006-01-16. This book comes from the Internet. Browsing the Web, I stumbled on philosophers, cognitive scientists, sociologists, computer scientists, even mathematicians, saying original, provocative things about mathematics. And many of these people had probably never heard of each other. So I have collected them here. This way they can read each other's work. I also bring back a few provocative oldies.

that deserve publicity The authors are philosophers mathematicians a cognitive scientist an anthropologist a computer scientist and a couple of sociologists Among the mathematicians are two Fields Prize winners and two Steele Prize winners None are historians I regret to say but there are two historically oriented articles These essays don't share any common program or ideology The standard for admission was Nothing boring Nothing trite nothing trivial Every essay is challenging thought provoking and original Back in the 1970s when I started writing about mathematics instead of just doing mathematics I had to complain about the literature Philosophy of science was already well into its modern revival largely stimulated by the book of Thomas Kuhn But philosophy of mathematics still seemed to be mostly foundationist ping pong in the ancient style of Rudolf Carnap or Willard Van Ormon Quine The great exception was Proofs and Refutations by Imre Lakatos But that exciting book was still virtually unknown and unread by either mathematicians or philosophers I wrote an article entitled Introducing Imre Lakatos in the Mathematical Intelligencer in 1978
