Economics for the Common Good Jean Tirole, 2019-05-14 When Jean Tirole won the 2014 Nobel Prize in Economics he suddenly found himself being

stopped in the street by complete strangers and asked to comment on issues of the day no matter how distant from his own areas of research His transformation from academic economist to public intellectual prompted him to reflect further on the role economists and their discipline play in society The result is *Economics for the Common Good* a passionate manifesto for a world in which economics far from being a dismal science is a positive force for the common good Economists are rewarded for writing technical papers in scholarly journals not joining in public debates But Tirole says we urgently need economists to engage with the many challenges facing society helping to identify our key objectives and the tools needed to meet them To show how economics can help us realize the common good Tirole shares his insights on a broad array of questions affecting our everyday lives and the future of our society including global warming unemployment the post 2008 global financial order the euro crisis the digital revolution innovation and the proper balance between the free market and regulation Providing a rich account of how economics can benefit everyone *Economics for the Common Good* sets a new agenda for the role of economics in society Provided by publisher

Technology and the Rise of Great Powers Jeffrey Ding, 2024-08-20

Technological revolutions have long been understood as one of the key factors affecting the rise of great powers Yet when these dynamics have been studied the focus tends to be on the moment of innovation where was a key technology invented In this book Jeffrey Ding argues that it is not innovation but rather the way a technology diffuses through a country that determines whether and how it strengthens the state The result is a new way to consider how technology and power have played out over history and what this might mean for the future To make this case Ding first outlines a new theory that centers on not the creation of new technology but its spread across society looking specifically at the role of education in promoting technological skill and literacy He then shows how this approach changes our understanding of three canonical cases Britain's rise during the first industrial revolution America's rise during the second industrial revolution and Japan's rise and decline during the third industrial revolution He then expands out to consider what this theory would predict for the coming competition between the United States and China in an AI driven fourth industrial revolution The result is an ambitious wide ranging take on how technology shapes world order Provided by publisher
