An OS has three main objectives:

An operating system has two basic functions:

1. Resource management

- Process management
- Memory management
- I/O device management
- File management

2. Virtual machine management

1. The Operating System as Resource Manager

Computer systems consist of different hardware and software as resources such as processors, memory, timers, disks, n/w interfaces and so on. Each of these resources has its own functionality and usage which needs to be managed and piled up to make whole computer system work efficiently and complete the given task.
