Biochemistry for Sport and Exercise Metabolism Donald MacLaren,James Morton,2011-12-12 How do our muscles produce energy for exercise and what are the underlying biochemical principles involved These are questions that students need to be able to answer when studying for a number of sport related degrees This can prove to be a difficult task for those with a relatively limited scientific background Biochemistry for Sport and Exercise Metabolism addresses this problem by placing the primary emphasis on sport and describing the relevant biochemistry within this context The book opens with some basic information on the subject including an overview of energy metabolism some key aspects of skeletal muscle structure and function and some simple biochemical concepts It continues by looking at the three macromolecules which provide energy and structure to skeletal muscle carbohydrates lipids and protein The last section moves beyond biochemistry to examine key aspects of metabolism the regulation of energy production and storage Beginning with a chapter on basic principles of regulation of metabolism it continues by exploring how metabolism is influenced during high intensity prolonged and intermittent exercise by intensity duration and nutrition Key Features A clearly written well presented introduction to the biochemistry of muscle metabolism Focuses on sport to describe the relevant biochemistry within this context In full colour throughout it includes numerous illustrations together with learning objectives and key points to reinforce learning Biochemistry for Sport and Exercise Metabolism will prove invaluable to students across a range of sport related courses who need to get to grips with how exercise mode intensity duration training status and nutritional status can all affect the regulation of energy producing pathways and more important

apply this understanding to develop training and nutrition programmes to maximise athletic performance *Greening of Capitalism* John A. Mathews, 2014-12-17 As China India and other industrializing giants grow they are confronted with an inconvenient truth They cannot rely on the conventions of capitalism as we know them today Western industrialism has achieved miracles promoting unprecedented levels of prosperity and raising hundreds of millions out of poverty Yet if allowed to proceed unencumbered this paradigm will do irreversible harm to the planet By necessity a new approach to environmentally conscious development is already emerging in the East with China leading the way Positioning its argument against zero growth advocates and free market environmentalists *Greening of Capitalism* charts this transformation and sketches out a framework for more sustainable capitalism State mandated changes in energy use as opposed to carbon taxes a circular flow of resources as opposed to emissions standards and the introduction of new financial instruments that support green growth are cornerstones of China's framework John A Mathews argues that these tenets will be emulated around the world first in India and Brazil In light of this emerging shift Mathews considers core debates over national security international relations and economic policy ultimately addressing the question of whether these measures will be far reaching or timely enough to prevent further damage
