

THE PROPERTIES OF MATTER

Review Worksheet

1. What are the properties of matter? Properties of matter are the characteristics that categorize and describe matter.

- a. Mass is the amount of matter an object contains. Volume is the amount of space an object takes up. Weight is the force of gravity acting on the mass of the object. Temperature is a measure of how hot or cold an object is. Color is the visual appearance of an object. Texture is the feeling of an object's surface.
- b. Atoms are the smallest particles of matter that cannot be further divided. Elements are substances that consist of only one type of atom. Compounds are substances that consist of two or more different types of atoms. Mixtures are substances that consist of two or more different substances that are not chemically combined. Physical properties are properties that can be observed without changing the substance's identity. Chemical properties are properties that can only be observed when a substance undergoes a chemical change. Physical changes are changes in the form or appearance of a substance that do not change its identity. Chemical changes are changes in the identity of a substance. Physical properties include color, texture, mass, volume, weight, and density. Chemical properties include flammability, reactivity, and toxicity.
- c. Atoms are the smallest particles of matter that cannot be further divided. Elements are substances that consist of only one type of atom.
