Database Theory - ICDT '95 Georg Gottlob, 1995-01-03 This volume presents the proceedings of the 1995 International Conference on Database Theory ICDT 95 held in Prague in January 1995 Besides two full invited papers and the abstracts of two tutorials the book includes the revised full versions of 29 technical contributions selected from a total of 116 submissions The papers address all current aspects of database theory they are organized in sections on optimization nonmonotonic semantics query languages concurrency control advanced models probabilistic methods constraints and dependencies and Datalog analysis

Constraint Databases Gabriel Kuper, Leonid Libkin, Jan Paredaens, 2013-03-09 This book is the first comprehensive survey of the field of constraint databases Constraint databases are a fairly new and active area of database research The key idea is that constraints such as linear or polynomial equations are used to represent large or even infinite sets in a compact way The ability to deal with infinite sets makes constraint databases particularly promising as a technology for integrating spatial and temporal data with standard relational databases Constraint databases bring techniques from a variety of fields such as logic and model theory algebraic and computational geometry as well as symbolic computation to the design and analysis of data models and query languages The book is a collaborative effort involving many authors who have contributed chapters on their fields of expertise Despite this the book is designed to be read as a whole as opposed to a collection of individual surveys In particular the terminology and the style of presentation have been standardized and there are multiple cross references between the chapters The idea of constraint databases goes back to the late Paris Kanellakis

Database and Expert Systems Applications Trevor Bench-Capon, Giovanni Soda, Min A Tjoa, 1999-08-20 The Database and Expert Systems Applications DEXA conferences bring together researchers and practitioners from all over the world to exchange ideas experiences and opinions in a friendly and stimulating environment The papers are at once a record of what has been achieved and the first steps towards shaping the future of information systems DEXA covers a broad field and all aspects of database knowledge base and related technologies and their applications are represented Once again there were a good number of submissions 241 papers were submitted and of these the programme committee selected 103 to be presented DEXA 99 took place in Florence and was the tenth conference in the series following events in Vienna Berlin Valencia Prague Athens London Zurich Toulouse and Vienna The decade has seen many developments in the areas covered by DEXA developments in which DEXA has played its part I would like to express thanks to all the institutions which have actively supported and made possible this conference namely University of Florence Italy IDG CNR Italy FAW University of Linz Austria Austrian Computer Society DEXA Association In

Formal Methods in Databases and Software Engineering V.S. Alagar,Laks V.S. Lakshmanan,F. Sadri,2012-12-06 Logic and object orientation have come to be recognized as being among the most powerful paradigms for modeling information systems The term information systems is used here in a very general context to denote database systems software development systems knowledge base systems proof support systems distributed systems and reactive systems One of the most vigorously researched topics common to all information systems is formal modeling An elegant high level abstraction applicable to both application domain and system domain concepts will always lead to a system design from outside in that is the aggregation of ideas is around real life objects about which the system is to be designed Formal methods when applied with this view in mind especially during early stages of system development can lead to a formal reasoning on the intended properties thus revealing system flaws that might otherwise be discovered much later Logic in different styles and semantics is being used to model databases and their transactions it is also used to specify concurrent distributed real time and reactive systems The notion of object is central to the modeling of object oriented databases as well as object oriented design and programs in software engineering Both database and software engineering communities have undoubtedly made important contributions to formalisms based on logic and objects It is worthwhile bringing together the ideas developed by the two communities in isolation and focusing on integrating their common strengths [Comprehensive Guide to SBI Bank PO Preliminary & Main Exam with 5 Online Tests \(9th Edition\)](#) Disha Experts,2020-02-04
