Natural selection lab

Objective(s):

In this lab, we will learn to:

- identify different types of evolutionary adaptations
- explain ways in which genetic variation and environmental factors contribute to evolution by natural selection and diversity
- simulate the effects of natural selection and genetic variation under specific environmental conditions=

Hypotheses:

1. The environment with snow will have an increase in population of white rabbits over time.
2. the Environment with brown woods will have a decrease in population of white rabbits over time.

Variables:

- IV- control of predatory bird
- DV- number/color of fur of rabbits that survive over generation
- con- con-amount of rabbits initially/Environment

Materials:

A Lab for All Seasons Sharon E. Kingsland, 2023-07-25 The first book to chronicle how innovation in laboratory designs for botanical research energized the emergence of physiological plant ecology as a vibrant subdiscipline Laboratory innovation since the mid twentieth century has powered advances in the study of plant adaptation evolution and ecosystem function The phytotron an integrated complex of controlled environment greenhouse and laboratory spaces invented by Frits W Went in the 1950s set off a worldwide laboratory movement and transformed the plant sciences Sharon Kingsland explores this revolution through a comparative study of work in the United States France Australia Israel the USSR and Hungary These advances in botanical research energized physiological plant ecology Case studies explore the development of phytotron spinoffs such as mobile laboratories rhizotrons and ecotrons Scientific problems include the significance of plant

emissions of volatile organic compounds symbiosis between plants and soil fungi and the discovery of new pathways for photosynthesis as an adaptation to hot dry climates The advancement of knowledge through synthesis is a running theme linking disciplines combining laboratory and field research and moving across ecological scales from leaf to ecosystem The book also charts the history of modern scientific responses to the emerging crisis of food insecurity in the era of global warming

Wild Immunology—The Answers Are Out There Gregory M. Woods, Andrew S. Flies, 2019-03-20 Go into partnership with nature she does more than half the work and asks none of the fee Martin H Fisher Nature has undertaken an immense amount of work throughout evolution The evolutionary process has provided a power of information that can address key questions such as Which immune molecules and pathways are conserved across species Which molecules and pathways are exploited by pathogens to cause disease What methods can be broadly used or readily adapted for wild immunology How does co infection and exposure to a dynamic environment affect immunity Section 1 addresses these questions through an evolutionary approach Laboratory mice have been instrumental in dissecting the nuances of the immune system The first paper investigates the immunology of wild mice and reviews how evolution and ecology sculpt differences in the immune responses of wild mice and laboratory mice A better understanding of wild immunology is required and sets the scene for the subsequent papers Although nature doesn't ask for a fee it is appropriate that nature is repaid in one form or another The translational theme of the second section incorporates papers that translate wild immunology back to nature But any non human non laboratory mouse research environment is hindered by a lack of research tools hence the underlying theme throughout the second section Physiological resource allocation is carefully balanced according to the most important needs of the body Tissue homeostasis can involve trade offs between energy requirements of the host and compensatory mechanisms to respond to infection The third section comprises a collection of papers that employ novel strategies to understand how the immune system is compensated under challenging physiological situations Technology has provided substantial advances in understanding the immune system at cellular and molecular levels The specificity of these tools e.g monoclonal antibodies often limits the study to a specific species or strain A consequence of similar genetic sequences or cross reactivity is that the technology can be adapted to wild species Section 4 provides two examples of probing wild immunology by adapting technology developed for laboratory species

Methuselah Flies: A Case Study In The Evolution Of Aging Michael Robertson Rose, Hardip B Passananti, Margarida Matos, 2004-06-14 Methuselah Flies presents a trailblazing project on the biology of aging It describes research on the first organisms to have their lifespan increased and their aging slowed by hereditary manipulation These organisms are fruit flies from the species *Drosophila melanogaster* the great workhorse of genetics Michael Rose and his

colleagues have been able to double the lifespan of these insects and improved their health in numerous respects as well. The study of these flies with postponed aging is one of the best means we have of understanding and ultimately achieving the postponement of aging in humans. As such, the carefully presented detail of this book will be of value to research devoted to the understanding and control of aging. *Methuselah Flies* is a tightly edited distillation of twenty years of work by many scientists. It contains the original publications regarding the longer lived fruit flies, offers commentaries on each of the topics covered, new short essays that put the individual research papers in a wider context, gives full access to the original data, captures the scientific significance of postponed aging for a wide academic audience. *Increasing Student Comprehension of Evolution Through Laboratory Investigations and Simulations* Steven W. Handbook of Research on Science Education, Volume II Norman G. Lederman, Sandra K. Abell, 2014-07-11 Building on the foundation set in Volume I, a landmark synthesis of research in the field, Volume II is a comprehensive state of the art new volume highlighting new and emerging research perspectives. The contributors, all experts in their research areas, represent the international and gender diversity in the science education research community. The volume is organized around six themes: theory and methods of science education research, science learning, culture, gender and society, and science learning, science teaching, curriculum and assessment in science, science teacher education. Each chapter presents an integrative review of the research on the topic, it addresses pulling together the existing research, working to understand the historical trends and patterns in that body of scholarship, describing how the issue is conceptualized within the literature, how methods and theories have shaped the outcomes of the research, and where the strengths, weaknesses, and gaps are in the literature. Providing guidance to science education faculty and graduate students and leading to new insights and directions for future research, the *Handbook of Research on Science Education, Volume II* is an essential resource for the entire science education community. [Darwin's Spectre](#) Michael R. Rose, 2000-01-31 Extending the human life span past 120 years. The green revolution. Evolution and human psychology. These subjects make today's newspaper headlines. Yet much of the science underlying these topics stems from a book published nearly 140 years ago: Charles Darwin's *On the Origin of Species*. Far from an antique idea restricted to the nineteenth century, the theory of evolution is one of the most potent concepts in all of modern science. In *Darwin's Spectre*, Michael Rose provides the general reader with an introduction to the theory of evolution, its beginning with Darwin, its key concepts, and how it may affect us in the future. First comes a brief biographical sketch of Darwin. Next, Rose gives a primer on the three most important concepts in evolutionary theory: variation, selection, and adaptation. With a firm grasp of these concepts, the reader is ready to look at modern applications of evolutionary theory. Discussing agriculture, Rose shows how even before Darwin, farmers and ranchers unknowingly experimented with evolution. Medical research, however, has ignored Darwin's lessons until recently, with potentially grave consequences. Finally, evolution supplies important new vantage points on human nature. If humans weren't created by deities, then our nature may be determined more by evolution than we

have understood Or it may not be In this question as in many others the Darwinian perspective is one of the most important for understanding human affairs in the modern world Darwin s Spectre explains how evolutionary biology has been used to support both valuable applied research particularly in agriculture and truly frightening objectives such as Nazi eugenics Darwin s legacy has been a comfort and a scourge But it has never been irrelevant **ERDA Authorizing Legislation,**

received increasing attention as more genomes became available and because of the development of genome editing tools such as the CRISPR Cas9 technology which has made diatoms as genetically tractable as well established biological model species This book provides an overview on diatom molecular biology It brings together international leading experts in the field to discuss the latest data and developments from genes to ecosystems As the understanding of diatoms is currently experiencing a step change it is critical to allow for synergistic approaches on diverse aspects of diatom biology and evolution The books offers fundamental insights into the molecular life of diatoms at the same time new scientific concepts are developed based on the application of the latest molecular tools and genomic information to explore the fascinating lifestyle of diatoms

Men Richard G. BRIBIESCAS, 2009-06-30 Males account for roughly 50 percent of the global population but in America and other places they account for over 85 percent of violent crime A graph of relative risk of death in human males shows that mortality is high immediately following birth falls during childhood then exhibits a distinct rise between the ages of 15 and 35 primarily the result of accidents violence and risky behaviors Why What compels males to drive fast act violently and behave stupidly Why are men s lives so different from those of women Men presents a new approach to understanding the human male by drawing upon life history and evolutionary theory Because life history theory focuses on the timing of and energetic investment in particular aspects of physiology such as growth and reproduction Richard Bribiescas and his fellow anthropologists are now using it in the study of humans This has led to an increased understanding of human female physiology especially growth and reproduction from an evolutionary and life history perspective However little attention has been directed toward these characteristics in males Men provides a new understanding of human male physiology and applies it to contemporary health issues such as prostate cancer testosterone replacement therapy and the development of a male contraceptive Men proves that understanding human physiology requires global research in traditionally overlooked areas and that evolutionary and life history theory have much to offer toward this endeavor

Lecture-free Teaching Bonnie S. Wood, 2009 **Cognitive Contributions to the Perception of Spatial and Temporal Events** G. Aschersleben, T. Bachmann, J. Müsseler, 1999-11-18 The book is concerned with the cognitive contributions to perception that is with the influence of attention intention or motor processes on performances in spatial and temporal tasks The chapters deal with fundamental perceptual processes resulting from the simple localization of an object in space or from the temporal determination of an event within a series of events Chapters are based on presentations given at the Symposium on the Cognitive Contributions to the Perception of Spatial and Temporal Events September 7-9 1998 Ohlstadt Germany Following each chapter are commentary pieces from other researchers in the field At the meeting contributors were encouraged to discuss their theoretical positions along with presenting empirical results and the book s commentary sections help to preserve the spirit and controversies of the symposium The general topic of the book is split into three parts Two sections are devoted to the perception of unimodal spatial and temporal events and are

accompanied by a third part on spatio temporal processes in the domain of intermodal integration The themes of the book are highly topical There is a growing interest in studies both with healthy persons and with patients that focus on localization errors and dissociations in localizations resulting from different tasks These errors lead to new concepts of how visual space is represented Such deviations are not only observed in the spatial domain but in the temporal domain as well Typical examples are errors in duration judgments or synchronization errors in tapping tasks In addition several studies indicate the influence of attention on both the timing and on the localization of dynamic events Another intriguing question originates from well known interactions between intermodal events namely whether these events are based on a single representation or whether different representations interact
