

GENETICS: X LINKED GENES

****In fruit flies, eye color is a sex linked trait. Red is dominant to white ****

1. What are the sexes and eye colors of flies with the following genotypes:

$X^R X^r$ Red $X^R Y$ Red $X^r X^r$ White
 $X^R X^R$ Red $X^r Y$ White

2. What are the genotypes of these flies:

white eyed, male $X^r Y$ red eyed female (heterozygous) $X^R X^r$
 white eyed, female $X^r X^r$ red eyed, male $X^R Y$

3. Show the cross of a white eyed female $X^r X^r$ with a red-eyed male $X^R Y$.

	X^R	X^r
X^r	$X^R X^r$	$X^r X^r$
Y	$X^R Y$	$X^r Y$

4. Show a cross between a pure red eyed female and a white eyed male.

What are the genotypes of the parents: $X^R X^R$ & $X^r Y$

	X^R	X^r
X^R	$X^R X^R$	$X^R X^r$
Y	$X^R Y$	$X^r Y$

How many offspring are:

- white eyed, male 0
- white eyed, female 0
- red eyed, male 50%
- red eyed, female 50%

5. Show the cross of a red eyed female (heterozygous) and a red eyed male. What are the genotypes of the parents? $X^R X^r$ & $X^R Y$

	X^R	X^r
X^R	$X^R X^R$	$X^R X^r$
Y	$X^R Y$	$X^r Y$

How many offspring are:

- white eyed, male 25%
- white eyed, female 0
- red eyed, male 25%
- red eyed, female 50%

Math: What if in the above cross, 100 males were produced and 200 females. How many total red-eyed flies would there be? 250

Molecular and Cell Biology Methods for Fungi Amir Sharon, 2019-04-10 The kingdom Fungi constitutes an independent group equal in rank to that of plants and animals It is a diverse clade of heterotrophic eukaryotic organisms that shares some characteristics with animals and includes mushrooms molds yeasts as well as many other types of less well known organisms **The Last Book** John Williams, 2007-08-27 There have been many attempts to explain life For the most part they are variants on a religious or mystical theme These provide a purpose to life but not the purpose of life A full rational explanation of our existence based on our rapidly accumulating scientific knowledge has eluded us until now The explanation of life which is offered in this book draws on three main components evolution genetics and psychology However something exists in our mind which stops us from seeing clearly what is already before us Once this block is removed we can view life objectively and see it as a special form of information which has arisen through evolution Information is identified as the unifying entity of the universe which is inherent in the spatial arrangement of matter This book relates these findings to our world and our lives It sets out in rational terms where we came from how we got here and finally reveals our destiny www.thelastbook.co.uk **Foundations of Generic Optimization** R. Lowen, A. Verschoren, 2007-10-27 This is a comprehensive overview of the basics of fuzzy control which also brings together some recent research results in soft

computing in particular fuzzy logic using genetic algorithms and neural networks This book offers researchers not only a solid background but also a snapshot of the current state of the art in this field **Schizophrenia and Genetics** Jay

Joseph,2022-12-09 Schizophrenia is a widely investigated psychiatric condition and though there have been claims of gene associations decades of molecular genetic studies have failed to produce confirmed causative genes In this book Joseph focuses on the methodological shortcomings of schizophrenia genetic research His findings have major implications not only on how we understand the causes of schizophrenia and other psychiatric conditions but also on how we understand the causes of human behavior in general Chapters explore the differing theoretical concepts of schizophrenia molecular genetic research around schizophrenia family twin and adoption studies and non medical prevention and intervention strategies Prominent researchers and studies in the field are discussed and critiqued comprehensively throughout This book is essential reading for psychiatrists psychologists behavioral scientists and anyone interested in the causes of human behavior **The**

Kay,2000 This is a detailed history of one of the most important and dramatic episodes in modern science recounted from the novel vantage point of the dawn of the information age and its impact on representations of nature heredity and society Drawing on archives published sources and interviews the author situates work on the genetic code 1953 70 within the history of life science the rise of communication technosciences cybernetics information theory and computers the intersection of molecular biology with cryptanalysis and linguistics and the social history of postwar Europe and the United States Kay draws out the historical specificity in the process by which the central

biological problem of DNA based protein synthesis came to be metaphorically represented as an information code and a writing technology and consequently as a book of life This molecular writing and reading is part of the cultural production of the Nuclear Age its power amplified by the centuries old theistic resonance of the book of life metaphor Yet as the author points out these are just metaphors analogies not ontologies Necessary and productive as they have been they have their epistemological limitations Deploying analyses of language cryptology and information theory the author persuasively argues that technically speaking the genetic code is not a code DNA is not a language and the genome is not an information system objections voiced by experts as early as the 1950s Thus her historical reconstruction and analyses also serve as a critique of the new genomic biopower Genomic textuality has become a fact of life a metaphor literalized she claims as human genome projects promise new levels of control over life through the meta level of information control of the word the DNA sequences and its editing and rewriting But the author shows how the humbling limits of these scriptural metaphors also pose a challenge to the textual and material mastery of the genomic book of life

Biophysical Thermodynamics of

Intracellular Processes Lev A. Blumenfeld, Alexander N. Tikhonov, 2012-12-06 This book is aimed at a large audience from students who have a high school background in physics mathematics chemistry and biology to scientists working in the fields of biophysics and biochemistry The main aim of this book is to attempt to describe in terms of physical chemistry and chemical physics the peculiar features of machines having molecular dimensions which play a crucial role in the most important biological processes viz energy transduction and enzyme catalysis One of the purposes of this book is to analyze the physical background of the high efficiency of molecular machines functioning in the living cell This book begins with a brief review of the subject Chapter 1 Macro molecular energy transducing complexes operate with thermal chemical and mechanical energy therefore the appropriate framework to discuss the functioning of biopolymers comes from thermodynamics and chemical kinetics That is why we start our analysis with a consideration of the conventional approaches of thermodynamics and classical chemical kinetics and their application to the description of bioenergetic processes Chapter 2 Critical analysis of these approaches has led us to the conclusion that the conventional approaches of physical chemistry to the description of the functioning of individual macromolecular devices in many cases appear to be incomplete This prompted us to consider the general principles of living machinery from another point of view
