- 1** The carbon cycle is part of the natural exchange and recycling of materials in the environment. It relies on energy to bring about the changes involved. In the case of the carbon cycle this energy comes from chemical changes one of which is photosynthesis – a photochemical reaction dependent on sunlight.

Discussion could include reference to the major sources of energy that maintain the temperature of the planet, i.e. energy from the Sun and from radioactive decay in the Earth.

promoting Readers will learn the details of the plans for Persephone a real project that is part of the company Icarus
Interstellar s plans for the design and engineering of a living interior on a worldship to be constructed in Earth s orbit within
100 years Although the timeframe itself is only an estimate since it is contingent on many significant developments including
funding and technological advances the industry consensus is that within 100 years we will see manned space exploration
beyond our solar system This notion is shared by organizations such as the Initiative for Interstellar Studies and the DARPA
funded 100 year starship project This book specifically develops the principles for the construction of a living habitat within a
worldship a multi generational starship that contains its own world that supports colonists as it travels across great distances
between stars at a speed much slower than light Far from being a sterile industrial setup such as the ISS or even being a
bucolic suburbia as proposed by Gerard O Neill in the 1970s this worldship will provide the pre conditions for sustaining life
beyond Earth s environment which may also lead to the evolution of non terrestrial ecologies Drawing on the principles of
ecopoiesis and insights offered by the Biosphere 2 experiment that demonstrated what we have to learn about ecosystem
construction this book proposes first designing the soils of such a space It should then be possible to set up the conditions
that a first generation of colonists may experience in leaving our solar system to find new worlds to settle perhaps in
spreading life throughout the universe Although the book takes a unique view of ecology and sustainability within the setting
of a traveling starship it is equally concerned with the human experience on artificial worlds Chapters come from a range of
multi disciplinary thinkers who shed light on the brave new future ahead from different angles
