Linear Algebra And Optimization With Applications To Machine Learning - Volume Ii: Fundamentals Of Optimization Theory With Applications To Machine Learning Jean H Gallier,Jocelyn Quaintance,2020-03-16 Volume 2 applies the linear algebra concepts presented in Volume 1 to optimization problems which frequently occur throughout machine learning This book blends theory with practice by not only carefully discussing the mathematical underpinnings of each optimization technique but by applying these techniques to linear programming support vector machines SVM principal component analysis PCA and ridge regression Volume 2 begins by discussing preliminary concepts of optimization theory such as metric spaces derivatives and the Lagrange multiplier technique for finding extrema of real valued functions The focus then shifts to the special case of optimizing a linear function over a region determined by affine constraints namely linear programming Highlights include careful derivations and applications of the simplex algorithm the dual simplex algorithm and the primal dual algorithm The theoretical heart of this book is the mathematically rigorous presentation of various nonlinear optimization methods including but not limited to gradient descent the Karush Kuhn Tucker KKT conditions Lagrangian duality alternating direction method of multipliers ADMM and the kernel method These methods are carefully applied to hard margin SVM soft margin SVM kernel PCA ridge regression lasso regression and elastic net regression Matlab programs implementing these methods are included **Fundamentals of Design of Piloted Aircraft Flight Control Systems: Methods of analysis and synthesis of piloted aircraft flight control systems** United States.
