Algebra, Meaning, and Computation Kokichi Futatsugi, Jean-Pierre Jouannaud, José Meseguer, 2006-06-21 This volume honoring the computer science pioneer Joseph Goguen on his 65th Birthday includes 32 refereed papers by leading researchers in areas spanned by Goguen's work. The papers address a variety of topics from meaning, meta logic, specification and composition, behavior and formal languages as well as models, deduction and computation by key members of the research community in computer science and other fields connected with Joseph Goguen's work. *Prentice Hall Algebra 1* Jan Fair, 1992

Algebraic Topology from a Homotopical Viewpoint Marcelo Aguilar, Samuel Gitler, Carlos Prieto, 2008-02-02 The authors present introductory material in algebraic topology from a novel point of view in using a homotopy theoretic approach. This carefully written book can be read by any student who knows some topology, providing a useful method to quickly learn this novel homotopy theoretic point of view of algebraic topology. A Concrete Introduction to Higher Algebra Lindsay N. Childs, 2008-12-05 This book is an informal and readable introduction to higher algebra at the post calculus level. The concepts of ring and field are introduced through study of the familiar examples of the integers and polynomials. The new examples and theory are built in a well motivated fashion and made relevant by many applications to cryptography, coding, integration, history of mathematics and especially to elementary and computational number theory. The later chapters include expositions of Rabin's probabilistic primality test, quadratic reciprocity and the classification of finite fields. Over 900 exercises are found throughout the book. *Fundamentals of Adaptive Signal Processing* Aurelio Uncini, 2014-12-30 This book is an accessible guide to adaptive signal processing methods that equips the reader with advanced theoretical and practical tools for the study and development of circuit structures and provides robust algorithms relevant to a wide variety of application scenarios. Examples include multimodal and multimedia communications, the biological and biomedical fields, economic models, environmental sciences, acoustics, telecommunications, remote sensing, monitoring and in general the modeling and prediction of complex physical phenomena. The reader will learn not only how to design and implement the algorithms but also how to evaluate their performance for specific applications utilizing the tools provided. While using a simple mathematical language, the employed approach is very rigorous. The text will be of value both for research purposes and for courses of study.

Intermediate Mathematics: Book II Farhad Ghassemi Tari, Ph.D., 2024-06-05 Farhad Ghassemi Tari was born in Tehran, Iran. He currently resides in Oxnard, California. The author completed his Ph.D. program in Operations Research, applied mathematical programming and graduated from Texas A M University in 1980. Right after his graduation, he started teaching at Sharif University of Technology for thirty-six years, where he retired as an associate professor.
