Algorithms Data Mining:

The Top Ten Algorithms in Data Mining Xindong Wu,Vipin Kumar,2009-04-09 Identifying some of the most influential algorithms that are widely used in the data mining community The Top Ten Algorithms in Data Mining provides a description of each algorithm discusses its impact and reviews current and future research Thoroughly evaluated by independent reviewers each chapter focuses on a particular algorithm and is written by either the original authors of the algorithm or world class researchers who have extensively studied the respective algorithm The book concentrates on the following important algorithms C4 5 k Means SVM Apriori EM PageRank AdaBoost kNN Naive Bayes and CART Examples illustrate how each algorithm works and highlight its overall performance in a real world application The text covers key topics including classification clustering statistical learning association analysis and link mining in data mining research and development as well as in data mining machine learning and artificial intelligence courses By naming the leading algorithms in this field this book encourages the use of data mining techniques in a broader realm of real world applications It should inspire more data mining researchers to further explore the impact and novel research issues of these algorithms

Data Preprocessing in Data Mining Salvador García,Julián Luengo,Francisco Herrera,2014-08-30 Data Preprocessing for Data Mining addresses one of the most important issues within the well known Knowledge Discovery from Data process Data directly taken from the source will likely have inconsistencies errors or most importantly it is not ready to be considered for a data mining process Furthermore the increasing amount of data in recent science industry and business applications calls to the requirement of more complex tools to analyze it Thanks to data preprocessing it is possible to convert the impossible into possible adapting the data to fulfill the input demands of each data mining algorithm Data preprocessing includes the data reduction techniques which aim at reducing the complexity of the data detecting or removing irrelevant and noisy elements from the data This book is intended to review the tasks that fill the gap between the data acquisition from the source and the data mining process A comprehensive look from a practical point of view including basic concepts and surveying the techniques proposed in the specialized literature is given Each chapter is a stand alone guide to a particular data preprocessing topic from basic concepts and detailed descriptions of classical algorithms to an incursion of an exhaustive catalog of recent developments The in depth technical descriptions make this book suitable for technical professionals researchers senior undergraduate and graduate students in data science computer science and engineering

Principles of Data Mining David J. Hand,Heikki Mannila,Padhraic Smyth,2001-08-17 The first truly interdisciplinary text on data mining blending the contributions of information science computer science and statistics The growing interest in data mining is motivated by a common problem across disciplines how does one store access model and ultimately describe and understand very large data sets Historically different aspects of data mining have been addressed independently by different disciplines This is the first truly interdisciplinary text on data mining blending the contributions of information science

computer science and statistics The book consists of three sections The first foundations provides a tutorial overview of the principles underlying data mining algorithms and their application The presentation emphasizes intuition rather than rigor The second section data mining algorithms shows how algorithms are constructed to solve specific problems in a principled manner The algorithms covered include trees and rules for classification and regression association rules belief networks classical statistical models nonlinear models such as neural networks and local memory based models The third section shows how all of the preceding analysis fits together when applied to real world data mining problems Topics include the role of metadata how to handle missing data and data preprocessing

Data Mining Techniques Arun K. Pujari,2001 This Book Addresses All The Major And Latest Techniques Of Data Mining And Data Warehousing It Deals With The Latest Algorithms For Discussing Association Rules Decision Trees Clustering Neural Networks And Genetic Algorithms The Book Also Discusses The Mining Of Web Data Temporal And Text Data It Can Serve As A Textbook For Students Of Computer Science Mathematical Science And Management Science And Also Be An Excellent Handbook For Researchers In The Area Of Data Mining And Warehousing

Data Mining Algorithms Pawel Cichosz,2014-11-10 Data Mining Algorithms is a practical technically oriented guide to data mining algorithms that covers the most important algorithms for building classification regression and clustering models as well as techniques used for attribute selection and transformation model quality evaluation and creating model ensembles The author presents many of the important topics and methodologies widely used in data mining whilst demonstrating the internal operation and usage of data mining algorithms using examples in R

Data mining and analysis Mohammed J. Zaki,2017

Pattern Recognition Algorithms for Data Mining Sankar K. Pal,Pabitra Mitra,2004-05-27 This valuable text addresses different pattern recognition PR tasks in a unified framework with both theoretical and experimental results Tasks covered include data condensation feature selection case generation clustering classification and rule generation and evaluation Organized into eight chapters the book begins by introducing PR data mining and knowledge discovery concepts The authors proceed to analyze the tasks of multi scale data condensation and dimensionality reduction Then they explore the problem of learning with support vector machine SVM and conclude by highlighting the significance of granular computing for different mining tasks in a soft paradigm

Automating the Design of Data Mining Algorithms Gisele L. Pappa,Alex Freitas,2009-10-27 Data mining is a very active research area with many successful real world applications It consists of a set of concepts and methods used to extract interesting or useful knowledge or patterns from real world datasets providing valuable support for decision making in industry business government and science Although there are already many types of data mining algorithms available in the literature it is still difficult for users to choose the best possible data mining algorithm for their particular data mining problem In addition data mining algorithms have been manually designed therefore they incorporate human biases and preferences This book proposes a new approach to the design of data mining algorithms instead of relying on the slow and ad hoc process of manual algorithm

design this book proposes systematically automating the design of data mining algorithms with an evolutionary computation approach More precisely we propose a genetic programming system a type of evolutionary computation method that evolves computer programs to automate the design of rule induction algorithms a type of classification method that discovers a set of classification rules from data We focus on genetic programming in this book because it is the paradigmatic type of machine learning method for automating the generation of programs and because it has the advantage of performing a global search in the space of candidate solutions data mining algorithms in our case but in principle other types of search methods for this task could be investigated in the future

Data Mining the Web Zdravko Markov, Daniel T. Larose, 2007-04-25 This book introduces the reader to methods of data mining on the web including uncovering patterns in web content classification clustering language processing structure graphs hubs metrics and usage modeling sequence analysis performance

Contrast Data Mining Guozhu Dong, James Bailey, 2016-04-19 A Fruitful Field for Researching Data Mining Methodology and for Solving Real Life Problems Contrast Data Mining Concepts Algorithms and Applications collects recent results from this specialized area of data mining that have previously been scattered in the literature making them more accessible to researchers and developers in data mining and
