

AMERICAN AIRLINES ELECTRONIC RESERVATIONS PROCESSING SYSTEM

How push-buttons-to-computers speed air travel reservations...

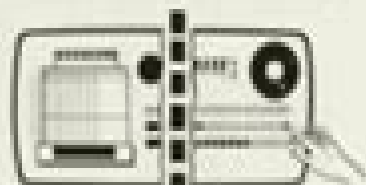

1. Passenger requests a seat on an airline by telephone or in person from any of the 1,000 American Airlines agent offices serving 50 states.

2. Agent finds out which seats are available on all flights for the desired day by pressing buttons that tell the computer what to do.

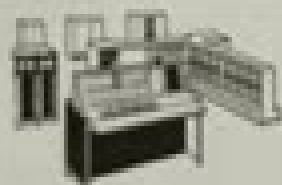

3. ... which is then used by the computer to search for the best route and to make reservations for the passenger.

4. Seat availability is checked and the agent from the computer terminal is told which seats are available on all flights for the desired day.

5. Passenger selects seat and confirms flight by pressing "agent action" button.

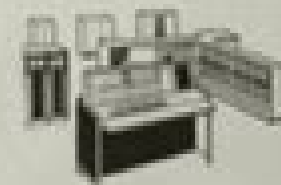

6. ... and the instructions for the computer to make reservations.

7. Computer confirms seat is automatically printing out an agent's printed list of seats - flight number, date, number of passengers, fare, class and departure and arrival times.

8. Agent is told to make additional information to computer's memory - flight number, date, number of passengers, fare, class and departure and arrival times.

9. Computer automatically checks and confirms the reservation and the agent is told it is ready to print out the passenger's flight with seat number, class and departure.

Central Processing Unit

In addition to handling the passenger's reservation, the new SAB system also:

Answers requests for space from other airlines.

Advises agents to record passengers to pick up tickets.

Monitors and processes passengers making bids for discounted flights.

Supplies fare quotations.

Supplies information on arrival and departure times.

Reminds agents to check scheduled passengers of any flight changes.
