Viacheslav V. Nikulin,Igor R. Shafarevich,2012-12-06 This book is devoted to the theory of geometries which are locally Euclidean in the sense that in small regions they are identical to the geometry of the Euclidean plane or Euclidean 3 space Starting from the simplest examples we proceed to develop a general theory of such geometries based on their relation with discrete groups of motions of the Euclidean plane or 3 space we also consider the relation between discrete groups of motions and crystallography The description of locally Euclidean geometries of one type shows that these geometries are themselves naturally represented as the points of a new geometry The systematic study of this new geometry leads us to 2 dimensional Lobachevsky geometry also called non Euclidean or hyperbolic geometry which following the logic of our study is constructed starting from the properties of its group of motions Thus in this book we would like to introduce the reader to a theory of geometries which are different from the usual Euclidean geometry of the plane and 3 space in terms of examples which are accessible to a concrete and intuitive study The basic method of study is the use of groups of motions both discrete groups and the groups of motions of geometries The book does not presuppose on the part of the reader any preliminary knowledge outside the limits of a school geometry course **Mathematical Challenges For All** Roza Leikin,2023-03-17

This book argues that mathematical challenge can be found at any level and at every age and constitutes an essential characteristic of any mathematics classroom aimed at developing the students mathematical knowledge and skills Since each mathematics classroom is heterogeneous with respect to students mathematical potential quality mathematical instruction results from matching the level of mathematical challenge to different students potential Thus effective integration of mathematical challenge in the instructional process is strongly connected to the equity principle of mathematics education In the three sections in this volume readers can find diverse views on mathematical challenges in curriculum and instructional

design kinds and variation of mathematically challenging tasks and collections of mathematical problems Evidence based analysis is interwoven with theoretical positions expressed by the authors of the chapters Cognitive social and affective characteristics of challenging mathematical activities are observed and analyzed The volume opens new avenues of research in mathematics education and pose multiple questions about mathematical instruction rich in mathematical challenge for all The authors invite readers to explore and enjoy mathematical challenges at different levels **Trivia Why's, Volume 1**
