What Makes Water So Special?

Why?

When you hear that NASA's space probes are looking for "evidence of life" on other planets, do you know what that means? They are looking for evidence of liquid water. Water is fundamental for all life; without it every living thing would die. Water covers about 70% of Earth's surface and it makes up 65–75% of our bodies (82% of our blood is water). Even if water might seem boring to you—no color, taste, or smell—it has amazing properties that make it necessary for supporting life.

Model 1 – The Molecular Structure of Water

1. How many hydrogen atoms are in a molecule of water?

There is 2 hydrogen atoms

2. How many oxygen atoms are in a molecule of water?

There is one atom of oxygen

3. What holds the hydrogen atoms to the oxygen atom?

Covalent Bonds

4. The shading around the molecule represents the relative density of electrons shared by the atoms. What does this indicate about the density of electrons around the oxygen atom as compared to the density of electrons around the hydrogen atoms?

a higher density of electrons around the oxygen atom
compared to the hydrogen atoms.

5. Where is the majority of negative charge on the water molecule?

The Properties of Water and Their Role in Colloidal and Biological Systems Carel J. Van Oss, 2008-11-19 The book also treats the surface properties of apolar and polar molecules polymers particles and cells as well as their mutual interaction energies when immersed in water under the influence of the three prevailing non covalent forces i e Lewis acid base AB Lifshitz van der Waals LW and electrical double layer EL interactions The polar AB interactions be they attractive or repulsive typically represent up to 90% of the total interaction energies occurring in water Thus the addition of AB energies to the LW EL energies of the classical DLVO theory of energy vs distance analysis makes this powerful tool the Extended DLVO theory applicable to the quantitative study of the stability of particle suspensions in water

and Chemical Properties of Water Donald T. Hawkins, 1976-04 Water is basic to terrestrial life and its distribution has controlled the growth and spread of human civilization The importance of water to modern industrial processes urban planning and agricultural development is hard to overestimate With these compelling motivations it is natural that more technical and scientific study should have been devoted to this one substance than to any other Research on water and its solutions has exhibited a marked expansion during the last decade In significant degree this has resulted from the availability of new experimental tools and techniques and of dramatic advances in computing science This combination in skilled hands promises eventually to explain the unusual properties of water and aqueous solutions in unequivocal molecular terms like wise one now has reasonable hope that the active role that water plays in biochemical processes will be revealed and explained quantitatively at the molecular level Owing to the widespread scholarly interest in aqueous science it is clear that guides to the overwhelming literature on the subject are valuable They serve ideally to indicate what is known and what is not which areas harbor controversies and what types of research attacks seem most fruitful in answering more questions than they raise Whatever time and resources need to be spent in preparing comprehensive bibliographies should be quickly offset in the total scientific community by the efficiencies generated **Drinking Water** Vladyslav V.
