Invasive and Introduced Plants and Animals Ian D. Rotherham, Robert A. Lambert, 2012-12-06 There have been many well publicized cases of invasive species of plants and animals often introduced unintentionally but sometimes on purpose causing widespread ecological havoc Examples of such alien invasions include pernicious weeds such as Japanese knotweed an introduced garden ornamental which can grow through concrete the water hyacinth which has choked tropical waterways and many introduced animals which have out competed and displaced local fauna This book addresses the broader context of invasive and exotic species in terms of the perceived threats and environmental concerns which surround alien species and ecological invasions As a result of unprecedented scales of environmental change combined with rapid globalisation the mixing of cultures and diversity and fears over biosecurity and bioterrorism the known impacts of particular invasions have been catastrophic However as several chapters show reactions to some exotic species and the justifications for interventions in certain situations including biological control by introduced natural enemies rest uncomfortably with social reactions to ethnic cleansing and persecution perpetrated across the globe The role of democracy in deciding and determining environmental policy is another emerging issue In an increasingly multicultural society this raises huge questions of ethics and choice At the same time in order to redress major ecological losses the science of reintroduction of native species has also come to the fore and is widely accepted by many in nature conservation However with questions of where and when and with what species or even species analogues reintroductions are acceptable the topic is hotly debated Again it is shown that many decisions are based on values and perceptions rather than objective science Including a wide range of case studies from around the world his book raises critical issues to stimulate a much wider debate

Exploring Your Environment Carrie Hartz, 2002 *Journal of Biological Education*, 1993 *Universities as Centres of Research and Knowledge Creation: An Endangered Species?*, 2008-01-01 Today unprecedented emphasis is being placed on research as key motor for advancing the knowledge society and its offspring the knowledge economy Consequently research on the state of research has moved high on the priority agendas for governments for their specialized agencies and bodies devoted to this area and for higher education institutions Against this background the central premise of the 2006 Global Colloquium of the UNESCO Forum for Higher Education Research and Knowledge Universities as Centres of Research and Knowledge Creation An Endangered Species was that research is a key ingredient in the institutional identity of universities and an indispensable prerequisite for a successful programme of teaching and public service Based on contributions to this Colloquium authors from twenty countries from all regions of the world analyse aspects related to the research function of universities This book primarily addresses the variety and gaps in higher education across the globe concentrating on the challenges to transitional and developing countries It addresses the related issues of research capacity research productivity and research relevance and utility Research capacity appears as a necessary but not sufficient condition for research productivity and research

with significant policy and institutional changes. However, a difficult set of obstacles stand in the way. Policy makers must keep in mind that there are both trade offs and synergies between human well being, ecosystems, and ecosystem services, and that decisions regarding these tradeoffs are difficult and often contentious. The Responses volume ultimately establishes which policy options have the greatest chance to overcome the obstacles and generate positive outcomes. It will serve as an invaluable guide to the creation of stronger policy frameworks for the future.
