Magnificent Mistakes in Mathematics Alfred S. Posamentier, Ingmar Lehmann, 2013-08-13 Two veteran math educators demonstrate how some magnificent mistakes had profound consequences for our understanding of mathematics key concepts In the nineteenth century English mathematician William Shanks spent fifteen years calculating the value of pi setting a record for the number of decimal places Later his calculation was reproduced using large wooden numerals to decorate the cupola of a hall in the Palais de la D couverte in Paris However in 1946 with the aid of a mechanical desk calculator that ran for seventy hours it was discovered that there was a mistake in the 528th decimal place Today supercomputers have determined the value of pi to trillions of decimal places This is just one of the amusing and intriguing stories about mistakes in mathematics in this layperson s guide to mathematical principles In another example the authors show that when we prove that every triangle is isosceles we are violating a concept not even known to Euclid that of betweenness And if we disregard the time honored Pythagorean theorem this is a misuse of the concept of infinity Even using correct procedures can

sometimes lead to absurd but enlightening results Requiring no more than high school level math competency this playful excursion through the nuances of math will give you a better grasp of this fundamental all important science **Science News-letter** ,1965 Guide to the Selection of Books for Your Elementary School Library [1973-74] Dorothy A. McGinniss,1973 **Revival: Philosophy and the Physicists (1937)** Lizzie Susan Stebbing,2018-05-08 This book is written by a philosopher for other philosophers and for that section of the reading public who buy in large quantities and no doubt devour with great earnestness the popular books written by scientists for their enlightenment We common readers to adapt a phrase from Samuel Johnson are fitted neither to criticize physical theories not to decide what precisely are their implications We are dependent upon the scientists for an exposition of those developments which so we find them proclaiming have important and far reaching consequences for philosophy Unfortunately however our popular expositors do not always serve us very well The two who are most widely read in this country are Sir Arthur Eddington and Sir James Jeans They are not always reliable guides Their influence has been considerable upon the reading public upon theologians and upon preachers they have even misled philosopher who should have known better Accordingly it has seemed to me to be worth while to examine in some detail the philosophical views that they have put forth and to criticize the grounds upon which these views are based
