preferences into engineering systems yields important cost and performance benefits that otherwise would not have been accomplished. In order for this new discipline to be effective, however, a cultural change starting with organizational leadership is often necessary. It provides an overview of how the field of economics addresses these difficulties, focusing on human issues associated with design, development, production, operations, maintenance, and sustainment of complex systems. The set of thought leaders recruited as contributors to this volume collectively provides a compelling set of data and principles for assessing the economic value of investing in people, not just in general but in specific investment situations. The early chapters provide the contexts for HSI and investment analysis, illustrating the enormous difference context makes in how issues are best framed and analyzed. A host of practical methods and tools for investment valuation are then presented. Provided are a variety of real world applications of economic analysis, ranging from military acquisition and automotive investment to healthcare and high tech investments in general, in both the U.S. and abroad. A range of economics-based methods and tools for cost analysis, cost-benefit analysis, and investment analysis, as well as sources of data for performing such analyses, are provided. Differing perspectives on economic decision making, including a range of private sector points of view as well as government and regulatory perspectives, are included. In addition, five real world case studies illustrate how such valuations have been done and their major impacts on investment decisions.
