Overview of Anatomy and Physiology

Anatomy: is the scientific study of the body's structures

Anatomy is broken down into 4 different branches:

Macroscopic or gross anatomy- is the study of the larger structures of the body, those visible without the aid of magnification. (Macro- means "large")

Microscopic anatomy- is the study of structures that can be observed only with the use of a microscope or other magnification devices. (Micro- means "small")

- **Cytology-** the study of cells
- **Histology-** the study of tissues.

Regional anatomy- is the study of the interrelationships of all the structures in a specific body region, such as the abdomen.

Systemic anatomy- is the study of the structures that make up a discrete body system.

Cells- is the smallest independently functioning unit of a living organism. A human cell typically consists of flexible membranes that enclose cytoplasm. Cells perform all functions of life.
