alive for those who design draw and use them They have for the moment a cognitive life To grapple with what this means to ask how maps can be alive and what kind of life they have is to explore the core question of what maps are And this is what Roberto Casati does in *The Cognitive Life of Maps* in the process assembling the conceptual tools for understanding why maps have the power they have why they are so widely used and how we use and misuse them Drawing on insights from cognitive science and philosophy of mind Casati considers the main claims around what maps are and how they work their specific syntax peculiar semantics and pragmatics He proposes a series of steps that can lead to a precise theory of maps one that reveals what maps have in common with diagrams pictures and texts and what makes them different This minimal theory of maps helps us to see maps nested in many cognitive artifacts clock faces musical notation writing calendars and numerical series for instance It also allows us to tackle the issue of the territorialization of maps to show how maps can be used to draw specific spatial inferences about territories From the mechanics of maps used for navigation to the differences and similarities between maps and pictures and models Casati s ambitious work is a cognitive map in its own right charting the way to a new understanding of what maps mean Annual Report of the Commissioner of Labor United States.
