The long and short of mental time travel-- self-projection over time-scales large and small James M. Broadway, Claire M. Zedelius, Jonathan W. Schooler, Simon Grondin, 2015-07-02 Researchers working in many fields of psychology and neuroscience are interested in the temporal structure of experience as well as the experience of time at scales of a few milliseconds up to a few seconds as well as days months years and beyond This Research Topic supposes that broadly speaking the field of time psychology can be organized by distinguishing between perceptual and conceptual time scales Dealing with conceptual time mental time travel also called mental simulation self projection episodic semantic memory propection foresight allows humans and perhaps other animals to imagine and plan events and experiences in their personal futures based in large part on memories of their personal pasts as well as general knowledge Moreover contents of human language and thought are fundamentally organized by a temporal dimension enmeshed with it so thoroughly that it is usually expressible only through spatial metaphors But what might such notions have to do with experienced durations of events lasting milliseconds up to a few seconds during the so called present moment of perception action cycle time This Research Topic is organized around the general premise that by considering how mental time travel might scale down to time perception and vice versa no less progress and integrative synthesis within and across scientific domains might be facilitated Bipolar configurations of future and past orientations of the self may be repeated in parallel across conceptual and perceptual time scales subsumed by a general Janus like feedforward feedback system for goal pursuit As an example it is notable that the duality of propection and semantic episodic memory operating at conceptual time scales has an analogue in perception action cycle time namely the interplay of anticipatory attention and working memory Authors from all areas of psychology and neuroscience are encouraged to submit articles of any format accepted by the journal Original Research Methods Hypothesis Theory Reviews etc which might speak to questions about time and temporal phenomena at long and or short time scales

The Evolution of Primate Societies John C. Mitani, Josep Call, Peter M. Kappeler, Ryne A. Palombit, Joan B. Silk, 2012-10-24 In 1987 the University of Chicago Press published *Primate Societies* the standard reference in the field of primate behavior for an entire generation of students and scientists But in the twenty five years since its publication new theories and research techniques for studying the Primate order have been developed debated and tested forcing scientists to revise their understanding of our closest living relatives Intended as a sequel to *Primate Societies* *The Evolution of Primate Societies* compiles thirty one chapters that review the current state of knowledge regarding the behavior of nonhuman primates Chapters are written by the leading authorities in the field and organized around four major adaptive problems primates face as they strive to grow maintain themselves and reproduce in the wild The inclusion of chapters on the behavior of humans at the end of each major section represents one particularly novel aspect of the book and it will remind readers what we can learn about ourselves through research on nonhuman primates The final section

highlights some of the innovative and cutting edge research designed to reveal the similarities and differences between nonhuman and human primate cognition The Evolution of Primate Societies will be every bit the landmark publication its predecessor has been The Oxford Handbook of Comparative Evolutionary Psychology Jennifer Vonk,Todd K.

Georges,2021-02-09 The Comparative Approach in Evolutionary Anthropology and Biology Charles L. Nunn,2011-07-05

Comparison is fundamental to evolutionary anthropology When scientists study chimpanzee cognition for example they compare chimp performance on cognitive tasks to the performance of human children on the same tasks And when new fossils are found such as those of the tiny humans of Flores scientists compare these remains to other fossils and contemporary humans Comparison provides a way to draw general inferences about the evolution of traits and therefore has long been the cornerstone of efforts to understand biological and cultural diversity Individual studies of fossilized remains living species or human populations are the essential units of analysis in a comparative study bringing these elements into a broader comparative framework allows the puzzle pieces to fall into place creating a means of testing adaptive hypotheses and generating new ones With this book Charles L Nunn intends to ensure that evolutionary anthropologists and organismal biologists have the tools to realize the potential of comparative research Nunn provides a wide ranging investigation of the comparative foundations of evolutionary anthropology in past and present research including studies of animal behavior biodiversity linguistic evolution allometry and cross cultural variation He also points the way to the future exploring the new phylogeny based comparative approaches and offering a how to manual for scientists who wish to incorporate these new methods into their research Personality and Temperament in Nonhuman Primates Alexander Weiss,James E.

King, Lindsay Murray, 2011-08-10 Recently there has been an increased interest in research on personality temperament and behavioral syndromes henceforth to be referred to as personality in nonhuman primates and other animals This follows in part from a general interest in the subject matter and the realization that individual differences once consigned to error terms in statistical analyses are potentially important predictors moderators and mediators of a wide variety of outcomes ranging from the results of experiments to health to enrichment programs Unfortunately while there is a burgeoning interest in the subject matter findings have been reported in a diverse number of journals and most of the methodological and statistical approaches were developed in research on human personality The proposed volume seeks to gather submissions from a variety of specialists in research on individual differences in primate temperament personality or behavioral syndromes We anticipate that chapters will cover several areas The first part of this edited volume will focus on methodological considerations including the advantages and disadvantages of different means of assessing these constructs in primates and introduce some statistical approaches that have typically been the domain of human personality research Another part of this edited volume will focus on present findings including the physiological and genetic bases of personality dimensions in primates the relationship between personality and age how personality may moderate or impact various outcomes including behavior health and well being in captive and non captive environments For the third part of the volume we hope to obtain summaries of the existing work of the authors on the evolutionary important of personality dimensions and guideposts for future directions in this new and exciting area of research Sourcebook of Paleolithic Transitions Marta

Neuroeconomics Paul E. Phillips, Jeansok J. Kim, Daeyeol Lee, The brain is the organ of decision making and evolved to maximize the outcomes desirable for the survival and reproduction of the species Compared to the sensory and motor functions of the brain however

the process of decision making is less accessible to direct experimental manipulations and hence requires more careful theoretical analyses. Indeed, the principle of optimality and frequent departures of human behaviors from those predicted for optimal rational decision makers have long been studied experimentally as well as theoretically. However, it is only recently that neurobiological studies of decision making started exploiting the framework previously developed in economics and psychology systematically. This cross disciplinary research program known as neuroeconomics has already been enormously successful. Increasingly, neuroscientists benefit from the studies of utility theory, game theory, prospect theory, and reinforcement learning theory and contribute to the refinement of such theories by providing more relevant empirical data. This Research Topic will showcase the recent advances in neuroeconomics that combine economic and behavioral analyses in neurobiological studies of value based decision making.

Malaria, 2019-12-11. Each year, malaria kills almost half a million people despite the fact that it is a preventable and curable disease. Malaria has a direct correlation with economic loss due to the need for people to take time off work and the cost of hospital treatments. Undertaking decisive measures to combat malaria is necessary. This book aims to present current approaches in the treatment of malaria. It will be a guide to those working in malaria endemic regions and cover both diagnosis and treatment. It will also be useful for medical workers in western countries where malaria is not as common. Considering that malaria causes morbidity and mortality more especially among children below five years of age and pregnant mothers, it is therefore imperative that people from all walks of life should join hands to address this public health problem.
