Engineering in Pre-College Settings Senay Purzer, Johannes Strobel, Monica E. Cardella, 2014-11-15 In science technology engineering and mathematics STEM education in pre college

engineering is not the silent one anymore. There is an accelerated interest in teaching engineering in all grade levels. Structured engineering programs are emerging in schools as well as in out of school settings. Over the last ten years the number of states in the US including engineering in their K-12 standards has tripled and this trend will continue to grow with the adoption of the Next Generation Science Standards. The interest in pre-college engineering education stems from three different motivations. First from a workforce pipeline or pathway perspective researchers and practitioners are interested in understanding precursors influential and motivational factors and the progression of engineering thinking. Second from a general societal perspective technological literacy and understanding of the role of engineering and technology is becoming increasingly important for the general populace and it is more imperative to foster this understanding from a younger age. Third from a STEM integration and education perspective engineering processes are used as a context to teach science and math concepts. This book addresses each of these motivations and the diverse means used to engage with them. Designed to be a source of background and inspiration for researchers and practitioners alike this volume includes contributions on policy synthesis studies and research studies to catalyze and inform current efforts to improve pre-college engineering education. The book explores teacher learning and practices as well as how student learning occurs in both formal settings such as classrooms and informal settings such as homes and museums. This volume also includes chapters on assessing design and creativity.
