

States of Matter – PhET Simulator

Instructions: Open the *States of Matter: Basics* simulator via the PhET website or app. Choose the “**States**” option. Change the temperature setting to “**Celsius**” above the thermometer.

- 1) Use the menu on the right side to select **Water** atoms, then choose the **Solid** state of matter. Draw a diagram of **solid water** below, and then **describe the molecules** in the next space.

Diagram	Description
	The water molecules are all very close together and vibrating slightly. Very little movement occurring.

- 2) Use the slider on the bottom to **add heat** (hold the fire upwards to heat). Note the thermometer changing as heat is added. What happens to the **water molecules** as heat is increased?

As heat is added, the water molecules begin to move more and separate from each other. They move further and further apart.

Experiment with the water molecules by **adding and removing heat**. Note the phase changes.

- 3) What is the approximate the **melting point** of water in Celsius?

(**Hint:** Check the temperature when this phase change occurs.)

0 degrees Celsius

- 4) How does the behavior of the water molecules **below the melting point** differ from water molecules that are **above the melting point**?

Below the melting point, molecules move slowly and close together. Above the melting point, molecules separate and move faster.

Representation, Inclusion, and Innovation Clayton Lewis, 2022-05-31 A representation is a thing that can be interpreted as providing information about something a map or a graph for example This book is about the expanding world of computational representations representations that use the power of computation to provide information in new forms and in new ways Unlike printed maps or graphs computational representations can be dynamic and even interactive so that what is represented and how can be shaped by user actions Exploring these new possibilities can be guided by an emerging theory of representation that clarifies what characteristics representations must have to express the meaning being represented and to enable users to discern that meaning easily and accurately The theory also shows the way to inclusive design for example using sounds to represent information commonly presented visually so that people who cannot see can understand what is being presented Because representations must be shaped by the abilities of their users and by the nature of the meanings they convey creating them requires perspectives from multiple disciplines including psychology as well as computer science and the sciences appropriate to the content being expressed The book presents a series of explorations of this large and complicated space as invitations to further study and to innovation
