Modern Data Processing for Management Bernard A. Hodson, 1973 **Data Warehousing and Knowledge Discovery** Il-Yeol Song, Johann Eder, Tho Manh Nguyen, 2008-08-30

Data Warehousing and Knowledge Discovery have been widely accepted as key technologies for enterprises and organizations as a means of improving their abilities in data analysis decision support and the automatic extraction of knowledge from data. With the exponentially growing amount of information to be included in the decision making process the data to be processed is becoming more and more complex in both structure and semantics. Consequently the process of retrieval and knowledge discovery from this huge amount of heterogeneous complex data constitutes the reality check for research in the area. During the past few years the International Conference on Data Warehousing and Knowledge Discovery DaWaK has become one of the most important international scientific events to bring together researchers developers and practitioners. The DaWaK conferences serve as a prominent forum for discussing the latest research issues and experiences in developing and deploying data warehousing and knowledge discovery systems applications and solutions. This year's conference the 10th International Conference on Data Warehousing and Knowledge Discovery DaWaK 2008 continued the tradition of facilitating the cross disciplinary exchange of ideas experience and potential research directions. DaWaK 2008 sought to disseminate innovative principles methods algorithms and solutions to challenging problems faced in the development of data warehousing knowledge discovery and data mining applications.
