a long overdue appreciation of the magnitude of this loss and a determination to develop the tools to protect our future. Second edition includes over 100 new articles and 226 updated articles covering this multidisciplinary field from evolution to habits to economics in 7 volumes. The editors of this edition are all well respected instantly recognizable academics operating at the top of their respective fields in biodiversity research; readers can be assured that they are reading material that has been meticulously checked and reviewed by experts. Approximately 1 800 figures and 350 tables complement the text and more than 3 000 glossary entries explain key terms.

Biological Soil Crusts: Spatio-temporal Development and Ecological Functions of Soil Surface Microbial Communities across Different Scales Shubin Lan, David R. Elliott, Sonia Chamizo, Vincent John Martin, Noah Linus Felde, Andrew David Thomas, 2024-08-09

Biological soil crusts (biocrusts) are widely distributed throughout the world and cover approximately 12% of the terrestrial surface. Biocrusts are composed of cyanobacteria, algae, lichens, mosses, and a great diversity of other microorganisms which bind soil particles together to form a layer of biological soil matrix on the soil surface typically of several millimetres thickness. They are important sites of regional and global microbial diversity and perform multiple ecological functions (multifunctionality). During the evolution of terrestrial life on earth, biocrusts are regarded as the main colonising photosynthetic organisms before the advent of vascular vegetation. They not only represent the early stages of terrestrial ecosystems but also facilitate the ecosystem's development and succession. Therefore, biocrusts are recognised as ecological engineers in the natural development of ecosystems and for the restoration of degraded terrestrial ecosystems. The development of biocrusts is highly heterogeneous which is reflected on both temporal and spatial scales and this heterogeneity is still clearly visible even in a small scale. However, up to now only limited knowledge is acquired on biocrust temporal and spatial organisation. In particular, there still is a large knowledge gap regarding the various biocrust communities under different developmental states and their related physiological metabolisms and ecological functions. Therefore, in-depth studies of these issues will undoubtedly further promote our understanding of the heterogeneous development of biocrusts as well as their ecological multifunctionality in terrestrial ecosystems. The relevant contributions are expected to provide a scientific basis for the management of biocrusts and technology development, e.g. cyanobacteria-induced biocrust technology for ecological restoration and the promotion of soil health.

Mangrove Ecology, Silviculture and Conservation Peter Saenger, 2013-06-29

Mangroves are a fascinating group of plants that occur on tropical and subtropical shorelines of all continents where they are exposed to saltwater inundation, low oxygen levels around their roots, high light and temperature conditions, and periodic tropical storms. Despite these harsh conditions, mangroves may form luxuriant forests which are of significant economic and environmental value throughout the world. They provide coastal protection and underpin fisheries and forestry operations as well as a range of other human activities. This book provides an up-to-date account of mangrove plants from around the world together with silvicultural and restoration techniques and the management requirements of

these communities to ensure their sustainability and conservation All aspects of mangroves and their conservation are critically re examined Those activities which threaten their ongoing survival are identified and suggestions are offered to minimise their effects on these significant plant communities

Visualizing Environmental Science Linda R. Berg, David M. Hassenzahl, Mary Catherine Hager, 2010-09-22 The new third edition provides environmental scientists with an approach that focuses on visuals rather than excessive content The streamlined coverage discusses the basic science so students walk away with a strong understanding of the facts New Think Critically and Data Interpretation features encourage them to analyse visuals and graphs to place information in context The illustrations have been improved and additional opportunities to conduct real data analysis have been added The What a Scientist Sees feature also gives environment scientists a real world perspective of how a concept or phenomenon is applied in the field

Atmospheric Carbon Dioxide and the Global Carbon Cycle John R. Trabalka, 1986 Toxicology Research Projects Directory , 1980-04 **Law and Ecology** Richard O. Brooks, Ross Jones, 2017-07-05 In 1970 Earth Day was first celebrated marking the dawn of worldwide environmental consciousness and the passing of many environmental laws In part these events were the result of the maturing of the science of ecology which recognized the interdependence of the web and cycles of nature This volume explores the relationship between ecology and environmental law beginning with a description of the two very different disciplines This description is followed by a history of their episodic interactions the early period of origin the mid century formative period from 1950 to 1970 the initial serious period of interaction after Earth Day in 1970 and the testing of the relationship during the next two decades Utilizing a number of case studies examinations of the key linkage persons legal instruments and the migration of ecological concepts and frameworks this book analyzes the final flowering of an ecosystem regime which embraces the connections between the two disciplines of ecology and environmental law Concluding with an inventory of the problems posed by the relationship between the two disciplines and an agenda for future research this clearly structured comprehensive and stringent book is an essential resource for all serious scholars and students of ecology and environmental law
