Rules of Indices

$2^3 \times 2^3 = 2^{(3+3)} = 2^6$
 $7^4 \times 7^2 = 7^{(4+2)} = 7^6$
 $(2^3)^2 = 2^{(3 \times 2)} = 2^6$
 2^{-1} = the reciprocal of 2 (i.e. $\frac{1}{2}$)

Multiples of 12 are: 12, 24, 36, 48 ...
 Factors of 12 are: 1, 2, 3, 4, 6, 12
 Prime numbers are: 2, 3, 5, 7, 11, 13 ...
 Square numbers are: 1, 4, 9, 16, 25 ...
 Triangle numbers are: 1, 3, 6, 10 ...
 Cube numbers are: 1, 8, 27, 64 ...

Calculate fraction of quantity
 To find $\frac{2}{5}$ of a quantity $\Rightarrow 2 \times 4 = 8$
 e.g. $\frac{2}{5}$ of £20 = $20 \div 5 \times 2 = £8$

Equations

- Multiply out brackets first
- If there are letters on both sides get rid of the smaller first
- Do the same to both sides

e.g.
 To solve $5(x-3) = 3x+7$ (expand brackets)
 $5x-15 = 3x+7$ (x from both sides)
 $2x-15 = 7$ (x on both sides)
 $2x = 22$ (+15 both sides)
 $x = 11$

Inequalities

Ratio

e.g. Divide £240 between A and B in ratio of 3:5

A = 3
 B = 5
 One share = £240 ÷ 8 = £30
 A = 3 shares = 3 x £30 = £90
 B = 5 shares = 5 x £30 = £150

Simplifying expressions

$3x + 4y - 7 + 2y = 3x + 6y - 7$
 $5p^2 - 2p + p^2 = 6p^2 - 2p$

Expanding brackets

Multiply everything inside the bracket by what is outside. Then collect like terms together.

e.g.
 $3(x+2) = 3x+6$
 $2(x-5) = 2x-10$
 $5(x-2) = 5x-10$

Watch for the negative sign in front of the bracket. It changes the sign inside the bracket.

e.g.
 $3(x-2) = 3x-6$
 $2(x-5) = 2x-10$
 $5(x-2) = 5x-10$

Factorise

$3x + 6 = 3(x+2)$
 $6x^2 - 8x = 2x(3-2)$

Expanding Double brackets

$(x+3)(x+4) = x^2 + 7x + 12$

Method:

Sequences

If the 1st difference is constant, it is linear

e.g.

3	7	11	15	19	23	...
+4	+4	+4	+4	+4		

The term to term rule is $+4$

nth term = $4n - 5$

The nth term can be used to find the term in any position

e.g. 10th term means $n=10$
 10^{th} term = $4 \times 10 - 5 = 39$

Visualisation and Epistemological Access to Mathematics Education in Southern Africa Marc

Schäfer,2023-04-27 This book demonstrates that using visualisation processes in mathematics education can help to enhance teaching and learning and bridge the inequality gap that exists between well resourced and under resourced schools in Southern Africa Drawing on classroom research conducted in the Southern African region it examines how epistemological access in a context of gross inequality can be constructively addressed by providing research based solutions and recommendations The book outlines the visualisation process as an integral but often overlooked process of mathematics teaching and learning It goes beyond the traditional understanding of visualisation processes such as picture forming and using tools and considers visualisation processes that are semiotic in nature and includes actions such as gestures in combination with language It adds value to the visualisation in mathematics education research discourse and deliberation in Africa With a unique focus on Southern Africa and open avenues for further research and collaboration in the region it will be a highly relevant reading for researchers academics and post graduate students of mathematics education comparative education and social justice education

The Mathematics of the Uncertain Eduardo Gil, Eva Gil, Juan Gil, María Ángeles Gil, 2018-02-28 This book is a tribute to Professor Pedro Gil who created the Department of Statistics OR and TM at the University of Oviedo and a former President of the Spanish Society of Statistics and OR SEIO In more than eighty original contributions it illustrates the extent to which Mathematics can help manage uncertainty a factor that is inherent to real life Today it goes without saying that in order to model experiments and systems and to analyze related outcomes and data it is necessary to consider formal ideas and develop scientific approaches and techniques for dealing with uncertainty Mathematics is crucial in this endeavor as this book demonstrates As Professor Pedro Gil highlighted twenty years ago there are several well known mathematical branches for this purpose including Mathematics of chance Probability and Statistics Mathematics of communication Information Theory and Mathematics of imprecision Fuzzy Sets Theory and others These branches often intertwine since different sources of uncertainty can coexist and they are not exhaustive While most of the papers presented here address the three aforementioned fields some hail from other Mathematical disciplines such as Operations Research others in turn put the spotlight on real world studies and applications The intended audience of this book is mainly statisticians mathematicians and computer scientists but practitioners in these areas will certainly also find the book a very interesting read

Linguistic Influences on Mathematical Cognition Ann Dowker,Hans-Christoph Nuerk,2017-06-16 For many years an abstract amodal semantic magnitude representation largely independent of verbal linguistic representations has been viewed as the core numerical or mathematical representation This assumption has been substantially challenged in recent years Linguistic properties affect not only verbal representations of numbers but also numerical magnitude representation spatial magnitude representations calculation parity representation place value representation and even early number acquisition Thus we postulate that numerical and arithmetic processing are not fully independent of linguistic processing This is not to say that in patients magnitude processing cannot function independently of linguistic processing we just suppose these functions are connected in the functioning brain So far much research about linguistic influences on numerical cognition has simply demonstrated that language influences number without investigating the level at which a particular language influence operates After an overview we present new findings on language influences on seven language levels Conceptual Conceptual properties of language Syntactic The grammatical structure of languages beyond the word level influences Semantic The semantic meaning or existence of words Lexical The lexical composition of words in particular number words Visuo spatial orthographic Orthographic properties such as the writing reading direction of a language Phonological Phonological phonetic properties of languages Other language related skills Verbal working memory and other cognitive skills related to language representations We hope that this book provides a new and structured overview on the exciting influences of linguistic processing on numerical cognition at almost all levels of language processing

Social, Developmental and Cognitive Perspectives Kinga Morsanyi, Irene Cristina Mammarella, Denes Szűcs, Carlo Tomasetto, Caterina Primi, Erin Anne Maloney, 2017-01-19 Mathematical anxiety is a feeling of tension apprehension or fear which arises when a person is faced with mathematical content The negative consequences of mathematical anxiety are well documented Students with high levels of mathematical anxiety might underperform in important test situations they tend to hold negative attitudes towards mathematics and they are likely to opt out of elective mathematics courses which also affects their career opportunities Although at the university level many students do not continue to study mathematics social science students are confronted with the fact that their disciplines involve learning about statistics another potential source of anxiety for students who are uncomfortable with dealing with numerical content Research on mathematical anxiety is a truly interdisciplinary field with contributions from educational developmental cognitive social and neuroscience researchers The current collection of papers demonstrates the diversity of the field offering both new empirical contributions and reviews of existing studies The contributors also outline future directions for this line of research **Inside Graduate Admissions**

Julie R. Posselt, 2016-01-11 How does graduate admissions work Who does the system work for and who falls through its cracks More people than ever seek graduate degrees but little has been written about who gets in and why Drawing on firsthand observations of admission committees and interviews with faculty in 10 top ranked doctoral programs in the humanities social sciences and natural sciences education professor Julie Posselt pulls back the curtain on a process usually conducted in secret Politicians judges journalists parents and prospective students subject the admissions policies of undergraduate colleges and professional schools to considerable scrutiny with much public debate over appropriate criteria But the question of who gets into Ph D programs has by comparison escaped much discussion That may change with the publication of *Inside Graduate Admissions* While the departments reviewed in the book remain secret the general process used by elite departments would now appear to be more open as a result of Posselt's book Scott Jaschik *Inside Higher Ed*
