Bioweathering is the dissolution of rocks and mineral substrates carried out by microorganisms along with mechanical and chemical processes. The application of bacteria in biomining is a biotechnological approach for the extraction and recovery of metals from ores. Microbes interact with minerals as a strategy to colonize and exploit habitats where the environmental parameters disadvantage other microorganisms and they demonstrate the capacity to scavenge critical elements with low bioavailability such as iron and phosphorus. There is an ongoing need to improve soil fertility and crop production particularly in dry places to remediate toxic soils and clean stone artworks and structures. A more complete understanding of the ecology of mineral weathering processes mediated by the microbiome may provide a significant opportunity for researchers to develop novel solutions to developing challenges in agriculture, the environment, and industry.

Islands and Cultures Kamanamaikalani Beamer, Te Maire Tau, Peter M. Vitousek, 2022-11-29. A uniquely collaborative analysis of human adaptation to the Polynesian islands told through oral histories, biophysical evidence, and historical records. Humans began to settle the area we know as Polynesia between 3,000 and 800 years ago, bringing with them material culture including plants and animals and ideas about societal organization, and then adapting to the specific biophysical features of the islands they

discovered The authors of this book analyze the formation of their human environment systems using oral histories biophysical evidence and historical records arguing that the Polynesian islands can serve as useful models for how human societies in general interact with their environments The islands clearly defined and relatively isolated environments comparatively recent discovery by humans and innovative and dynamic societies allow for insights not available when studying other cultures Kamana Beamer Te Maire Tau and Peter Vitousek have collaborated with a dozen other scholars many of them Polynesian to show how these cultures adapted to novel environments in the past and how we can draw insights for global sustainability today Announcement University of Michigan.
