Fisheries responses to invasive species in a changing climate Azzurro, E., Bahri, T. (ed.), Valbo-Jørgensen, J. (ed.), Ma, X. (ed.), Strafella, P. (ed.), Vasconcellos, M. (ed.), 2024-07-04 Due to the increasing pressure of a globalized economy and under the effects of a changing climate biological invasions have become a frequent feature of marine and freshwater environments Global fisheries and aquaculture are therefore required to adjust to these changes with the dual aim of reducing the negative ecological consequences caused by these species and making the most of the advantages they might bring Here capitalizing on a wide spectrum of management actions which can be implemented to control and or adapt to aquatic invasions nine measures are presented they can be grouped under environmental social or socioeconomic strategies exploring their potential main challenges and enabling factors The nine measures provided with key recommendations are 1 Develop and manage a commercial fishery 2 Promote recreational harvesting 3 Explore market opportunities 4 Implement outreach programmes 5 Foster stakeholder engagement 6 Implement spatial control 7 Implement biological control 8 Restore ecosystems 9 Do nothing These suggestions discussed among a group of international experts and presented in a synthetic form may be used as a practical resource though not an exhaustive one to aid in the evaluation and identification of appropriate fisheries management responses to aquatic invasive species in the context of climate change While it may not address all the complexities of the subject it provides a starting point for adaptation strategies recognizing the diverse legal cultural and socioeconomic conditions in different fishery contexts offering valuable insights for policymakers fisheries managers and practitioners who have to deal with aquatic invasions [Agricultural Implications of the Fukushima Nuclear Accident \(III\)](#) Tomoko M. Nakanishi, Martin O'Brien, Keitaro Tanoi, 2019-01-30 This open access book presents the findings from on site research into radioactive cesium contamination in various agricultural systems affected by the Fukushima Daiichi Nuclear Power Plant accident in March 2011 This third volume in the series reports on studies undertaken at contaminated sites such as farmland forests and marine and freshwater environments with a particular focus on livestock wild plants and mushrooms crops and marine products in those environments It also provides additional data collected in the subsequent years to show how the radioactivity levels in agricultural products and their growing environments have changed with time and the route by which radioactive materials entered agricultural products as well as their movement between different components e g soil water and trees within an environmental system e g forests The book covers various topics including radioactivity testing of food products decontamination trials for rice and livestock production the state of contamination in trees mushrooms and timber the dynamics of radioactivity distribution in paddy fields and upland forests damage incurred by the forestry and fishery industries and the change in consumers attitudes Chapter 19 introduces a real time radioisotope imaging system a pioneering technique to visualize the movement of cesium in soil and in plants This is the only book to provide systematic data on the actual change of radioactivity and as such is of great value to all researchers who

wish to understand the effect of radioactive fallout on agriculture In addition it helps the general public to better understand the issues of radio contamination in the environment The project is ongoing the research groups from the Graduate School of Agricultural and Life Sciences of The University of Tokyo continue their work in the field to further evaluate the long term effects of the Fukushima accident *Fishers and Plunderers* Alastair Couper,Hance D. Smith,Bruno Ciceri,2015-07-20

Abuses and slavery at sea are largely missing from narratives of work and environmental exploitation in the mainstream This book shines a light on the exploitation of fish and fishers alike in a global industry driven by profits Conservation and human rights in this industry are huge problems with vast overprovision of vessels and shortages of fish labour costs are targeted and young men are trafficked from poor areas onto vessels in virtual slavery The resultant poverty and debt bonding pushes many towards trafficking drugs and piracy although the criminality linked to the industry extends far beyond the level of the individual vessel or fleet Using first hand testimony and shocking examples of these abuses the book uncovers these crimes and injustices with the authors arguing for regulations which if implemented could protect the rights of fishers across the board **Biodiversity of Sensory Systems in Aquatic Vertebrates** Wayne Iwan Lee Davies,Shaun Collin,2020-08-27

People - Marine Mammal Interactions Andrew Butterworth,Mark P. Simmonds,2017-08-15 Our relationships with marine mammals are complex We have used them as resources and in some places this remains the case viewed them as competitors and culled them again ongoing in some localities been so captivated and intrigued by them that we have taken them into captivity for our entertainment and developed a lucrative eco tourism activity focused on them in many nations When we first envisaged this special topic we had two overarching aims Firstly we hoped to generate critical evaluation of some of our relationships with these animals Secondly we hoped to attract knowledgeable commentators and experts who might not traditionally publish in the peer reviewed literature We were also asking ourselves a question about what responsibility mankind might have to marine mammals on our rapidly changing planet The answer to the question can or should humans have responsibility for the lives of marine mammals when they are affected by our activities is in our opinion yes and the logical progression from this question is to direct research and effort to understand and optimise the actions reactions and responses that mankind may be able to take We hope that the papers in this special issue bring some illumination to a small selection of topics under this much wider topic area and prove to be informative and stimulating

OECD Studies on Water Pharmaceutical Residues in Freshwater Hazards and Policy Responses OECD, 2019-11-13 This report calls for a better understanding of the effects of pharmaceutical residues in the environment greater international collaboration and accountability distribution and policy actions to prevent and remedy emerging concerns Laboratory and field tests show traces of oral contraceptives causing the feminisation of fish and amphibians and residues of psychiatric drugs altering fish behaviour Antimicrobial resistance linked to the overuse of antibiotics has rapidly escalated into a global health crisis

Pharmaceutical Residues in Freshwater: Hazards and Policy Responses Organisation for Economic Co-Operation and Development (OECD), 2020-07-15 This report calls for a better understanding of the effects of pharmaceutical residues in the environment greater international collaboration and accountability distribution and policy actions to prevent and remedy emerging concerns Laboratory and field tests show traces of oral contraceptives causing the feminisation of fish and amphibians and residues of psychiatric drugs altering fish behaviour Antimicrobial resistance linked to the overuse of antibiotics has rapidly escalated into a global health crisis Unless adequate measures are taken to manage the risks pharmaceutical residues will increasingly be released into the environment as ageing populations advances in healthcare and intensification of meat and fish production spur the demand for pharmaceuticals worldwide The report outlines a collective life cycle approach to managing pharmaceuticals in the environment A policy mix of source directed use orientated and end of pipe measures involving several policy sectors can help to improve health and protect the environment

Effects of Climate Change Across Ocean Regions Ove Hoegh-Guldberg, Elvira S. Poloczanska, 2018-07-05 The IPCC Fifth Assessment Report AR5 highlighted that conditions within Earth's ocean are changing more rapidly than any of the time during the past 65 million years and as a consequence major changes are occurring in natural and human systems While this major report has enhanced our understanding of the complexity of ocean issues we propose this research topic as an opportunity to expand discussion on past present and future changes across oceans regions

Biogeomorphic Responses to Wildfire in Fluvial Ecosystems Joan L. Florsheim, Alison P. O'Dowd, Anne Chin, 2024-05-22 This volume draws together interdisciplinary studies that highlight key insights important to support heterogeneity biodiversity and resilience in fluvial ecosystems The syntheses point to greater emphasis on integrated approaches to advance strategies for ecosystem management toward conservation restoration and sustainable practices in particular to accommodate multiple possible postfire disturbance and recovery trajectories

Behavioural Responses to a Changing World Bob B. M. Wong, Ulrika Candolin, 2025-04-23 For many animals behavioural adjustments represent the first response to human modified conditions By improving reproduction and survival such adjustments can play the lead in maintaining viable populations in the face of rapid environmental change Behavioural

responses however can also be maladaptive and reduce individual fitness particularly if favourable reaction norms have not yet evolved because animals are encountering conditions that they have never experienced before Clearly behaviour matters But how can we capitalise on our understanding of animal behaviour to improve conservation and management outcomes Behavioural Responses to a Changing World Challenges and Applications a companion volume to the first edition published in 2012 examines wildlife behavioural responses to human induced environmental change through a translational lens Despite considerable and growing interest in research on the topic the predictive value and practical application of what has been learned remains underappreciated and underutilized in the context of developing real world solutions To redress this the current book builds upon the foundations of the original volume but with a more applied perspective that focuses on highlighting how different forms of environmental challenges from climate change to urbanisation influence animal behaviour and how we can effectively harness knowledge of animal behaviour to effect practical solutions to predicting and mitigating the weighty impacts of a radically changed and changing world

Advances in Comparative Immunology Edwin L. Cooper, 2018-08-07 Immunologists perhaps understandably most often concentrate on the human immune system an anthropocentric focus that has resulted in a dearth of information about the immune function of all other species within the animal kingdom However knowledge of animal immune function could help not only to better understand human immunology but perhaps more importantly it could help to treat and avoid the blights that affect animals which consequently affect humans Take for example the mass death of honeybees in recent years their demise resulting in much less pollination poses a serious threat to numerous crops and thus the food supply There is a similar disappearance of frogs internationally signaling ecological problems among them fungal infections This book aims to fill this void by describing and discussing what is known about non human immunology It covers various major animal phyla its chapters organized in a progression from the simplest unicellular organisms to the most complex vertebrates mammals Chapters are written by experts covering the latest findings and new research being conducted about each phylum Edwin L Cooper is a Distinguished Professor in the Laboratory of Comparative Immunology Department of Neurobiology at UCLA s David Geffen School of Medicine

Paris,Michael Schlüter,Dana L. Wetzel,2019-07-04 It has often been said that generals prepare for the next war by re fighting the last The Deepwater Horizon DWH oil spill was unlike any previous an underwater well blowout 1 500 meters deep Much has been learned in the wake of DWH and these lessons should in turn be applied to both similar oil spill scenarios and those arising from frontier explorations by the marine oil industry The next deep oil well blowout may be at 3 000 meters or even deeper This volume summarizes regional Gulf of Mexico and global megatrends in marine oil exploration and production Research in a number of

key areas including the behavior of oil and gas under extreme pressure impacts on biological resources of the deep sea and the fate of oil and gas released in spills is synthesized. A number of deep oil spills are simulated with detailed computer models and the likely effects of the spills and potential mitigation measures used to combat them are compared. Recommended changes in policies governing marine oil exploration and development are proposed as well as additional research to close critical and emerging knowledge gaps. This volume synthesizes state of the art research in deep oil spill behavior and response. It is thus relevant for government and industry oil spill responders, policy formulators and implementers and academics and students desiring an in depth and balanced overview of key issues and uncertainties surrounding the quest for deep oil and potential impacts on the environment.

Ecological Responses at Mount St. Helens: Revisited 35 years after the 1980 Eruption Charles M. Crisafulli, Virginia H. Dale, 2018-01-30. This book builds on existing work exploring succession, disturbance ecology and the interface between geophysical and biological systems in the aftermath of the 1980 eruptions of Mount St Helens. The eruption was dramatic both in the spatial extent of impacts and the range of volcanic disturbance types and intensities. Complex geophysical forces created unparalleled opportunities to study initial ecological responses and long term succession processes that occur in response to a major contemporary eruption across a great diversity of ecosystems: lowland to alpine forests, meadows, lakes, streams and rivers. These factors make Mount St Helens an extremely rich environment for learning about the ecology of volcanic areas and more generally about ecosystem response to major disturbance of many types including land management. Lessons about ecological recovery at Mount St Helens are shaping thought about succession, disturbance ecology, ecosystem management and landscape ecology. In the first five years after the eruption, several syntheses documented the numerous intensive studies of ecological recovery. The 2005 volume *Ecological Responses to the 1980 Eruption of Mount St Helens* (Springer Publishing) was the first ecological synthesis since 1987 of the scores of ecological studies underway in the area. More than half of the world's published studies on plant and animal responses to volcanic eruptions have taken place at Mount St Helens. The 25 year synthesis which generally included investigations i.e. data from 1980-2000 made it possible to more thoroughly analyze initial stages of ecological responses and to test the validity of early interpretations and the duration of early phenomena. And 35 years after the eruption, it is time for many of the scientists working in the first three decade post eruption period to pass the science baton to the next generation of scientists to work at Mount St Helens and a synthesis at this time of transfer of responsibility to a younger cohort of scientists will be an enormous asset to the continuation of work at the volcano.
