Principles of Heating, Ventilation, and Air Conditioning in Buildings John W. Mitchell, James E. Braun, 2012-03-06

Principles of HVAC in Buildings by J W Mitchell and J E Braun provides foundational knowledge for the behavior and analysis of HVAC systems and related devices The emphasis is on the application of engineering principles and features a tight integration of physical descriptions with a software program that allows performance to be directly calculated with results that provide insight into actual behavior The examples end of chapter problems and design projects are more than exercises they represent situations that an engineer might face in practice and are selected to illustrate the complex and integrated nature of an HVAC system or piece of equipment Coverage of material applicable to the field is broad a Fundamentals section on thermodynamics fluid flow heat transfer and psychrometrics types of HVAC systems and components comfort and air quality criteria a Loads section on weather data processing design heating and cooling loads an Equipment section on air and water distribution systems heating and cooling coils cooling towers refrigeration equipment and a Design and Control section on seasonal energy use control techniques supervisory control the HVAC design process and the rules of thumb often used in design The textbook provides a foundation for students and practicing engineers to design HVAC systems for buildings In addition there is extensive supplemental on line material that provides more in depth and comprehensive treatment of equipment and component modeling and performance that is geared towards current and future equipment design engineers

Solutions for Climate Change Challenges in the Built Environment Colin A. Booth, Felix N. Hammond, Jessica Lamond, David G. Proverbs, 2012-03-12 The multi disciplinary perspective provided here offers a strategic view on built environment issues and improve understanding of how built environment activities potentially induce global warming and climate change It also highlights solutions to these challenges Solutions to Climate change Challenges in the Built Environment helps develop an appreciation of the diverse themes of the climate change debate across the built environment continuum A wide perspective is provided through contributions from physical environmental social economic and political scientists This strategic view on built environment issues will be useful to researchers as well as policy experts and construction practitioners wanting a holistic view This book clarifies complex issues around climate change and follows five main themes climate change experiences urban landscape development urban management issues measurement of impact and the future Chapters are written by eminent specialists from both academic and professional backgrounds The main context for chapters is the developed world but the discussion is widened to incorporate regional issues The book will be valuable to researchers and students in all the built environment disciplines as well as to practitioners involved with the design construction and maintenance of buildings and government organisations developing and implementing climate change policy , *Atmospheric Chemistry and Physics* John H. Seinfeld, Spyros N. Pandis, 2012-12-18 Thoroughly restructured and updated with new findings and new features The Second Edition of this internationally acclaimed text

presents the latest developments in atmospheric science. It continues to be the premier text for both a rigorous and a complete treatment of the chemistry of the atmosphere covering such pivotal topics as Chemistry of the stratosphere and troposphere, Formation, growth, dynamics and properties of aerosols, Meteorology of air pollution, Transport, diffusion and removal of species in the atmosphere, Formation and chemistry of clouds, Interaction of atmospheric chemistry and climate, Radiative and climatic effects of gases and particles, Formulation of mathematical chemical transport models of the atmosphere. All chapters develop results based on fundamental principles enabling the reader to build a solid understanding of the science underlying atmospheric processes. Among the new material are three new chapters: Atmospheric Radiation and Photochemistry, General Circulation of the Atmosphere and Global Cycles. In addition, the chapters Stratospheric Chemistry, Tropospheric Chemistry and Organic Atmospheric Aerosols have been rewritten to reflect the latest findings. Readers familiar with the First Edition will discover a text with new structures and new features that greatly aid learning. Many examples are set off in the text to help readers work through the application of concepts. Advanced material has been moved to appendices. Finally, many new problems coded by degree of difficulty have been added. A solutions manual is available. Thoroughly updated and restructured, the Second Edition of *Atmospheric Chemistry and Physics* is an ideal textbook for upper level undergraduate and graduate students as well as a reference for researchers in environmental engineering, meteorology, chemistry and the atmospheric sciences. Method for Calculation of Laminar Heat Transfer in Air Flow Around Cylinders of Arbitrary Cross Section (including Large Temperature Differences and Transpiration Cooling) Dwight G. Moore, E. R. G. Eckert, H. S. Ribner, Herbert F. Hardrath, John D. Stanitz, Max. A. Heaslet, Simon Ostrach, United States. National Advisory Committee for Aeronautics, 1953

Principles Of Heating, Ventilation And Air Conditioning With Worked Examples Nihal E. Wijesundera, 2015-11-25. This book presents the most current design procedures in heating, ventilation and air conditioning (HVAC) available in handbooks like the ASHRAE American Society of Heating, Refrigeration and Air Conditioning Engineers Handbook 2013 Fundamentals in a way that is easier for students to understand. Every effort is made to explain in detail the fundamental physical principles that form the basis of the various design procedures. A novel feature of the book is the inclusion of about 15 worked examples in each chapter, carefully chosen to highlight the diverse aspects of HVAC design. The solutions for the worked examples clarify the physical principles behind the design method. In addition, there are problems at the end of each chapter for which numerical answers are provided. The book includes a series of MATLAB programs that may be used to solve realistic HVAC design problems which in general require extensive and repetitive calculations. Supplementary materials are available upon request for all instructors who adopt this book as a course text. Please send your request to sales@wspc.com
