*Drug Discovery*, 2009      **Validation of Cell-Based Assays in the GLP Setting** Uma Prabhakar, Marian Kelley, 2008-04-30  
The use of cell based assays within pharmaceutical and biotechnology companies is driven in large part by the need to evaluate the plethora of drug targets derived from genomics and proteomics. In addition, the potential of biomarkers to facilitate the development of effective and safe drugs is being recognized as an integral part of all phases of drug development and cell based technologies are a critical part of biomarker discovery and development. Despite this critical role, cell based assays have not been standardized and made compliant with Good Laboratory Practice guidelines. In this book, the editors have collected assays for which validation procedures have been developed, making this a vital purchase for anyone using such assays in drug development. This book describes the development, optimization, and validation of cell based assays, including procedural documentation required for Good Laboratory Practice. It presents validations of cell based assays for select targets with step by step instructions, allowing the reader to reproduce the assay conditions and results. It provides details of techniques used in the evaluation of immunodeficiency, autoimmune, and oncological disorders, including assessment of cancer vaccines. It offers a compendium of validation parameters that need to be considered when using these methods to develop a new drug. It includes detailed protocols for the evaluation of cytokines and of neutralizing antibodies directed against protein therapeutics. **Validation of Cell based Assays in the GLP Setting** provides the professional with an invaluable reference source featuring key guidelines. The book will prove extremely useful to all scientists working in the areas of drug development.      **The Immunoassay Handbook** David Wild, 2005-06-20.
