

Altus KC-135 and C-17 AIR REFUELING STUDY GUIDE

Mission Planning. You will be introduced to air refueling procedures in the KC-135 by flying with other students here at Altus along with pilots in operation units. Both the tanker and the receiver must be thoroughly familiar with all aspects of air refueling in order to adequately plan the mission. Crew coordination during air refueling is crucial to a safe and successful mission. All crewmembers must be completely familiar with their required responsibilities. They must also be familiar with the weather forecast for the air refueling area so alternate plans can be prepared (General Planning and Area Planning).

Communications Rendezvous (CR) Plan:

In FLIP (AP/1B), the column headed "CR Plan" lists the communication frequencies to be used during the air refueling mission. (See [Figure 1.1.](#)) Item "a" is the primary interplane UHF frequency used for communications during the air refueling mission; item "b" is the secondary UHF frequency. To use a UHF with Roger Wilco, simply type rw.ansim.net/235.10. Items "c" and "d" refer to radar beacon codes and item "d" is the air-to-air TACAN which are not compatible with the KC-135 in Flight Simulator. In place of the TACAN, we will use a AI Radar (or TCAS) which will be the primary method of affecting the rendezvous. Eric Marciano's AI radar is required since it has DME and identification capabilities.

REMARKS: Issued for exclusive use by 57 AFWS aircraft and support personnel only. Other aircraft permitted on route to/from base. The 57 OWS/OWS evaluate priority on mission. If subsequent coordination and coordination of mission may result in completion of the ARIP. Tanker and Receiver must check the time (3 hours up and down the track to ensure 3 hours of track time). Include these (3) hours of track time required in Remarks Section of DD Form 175, 500446 authorized AEG 621.

Figure 1.1. Required Reporting Points for A/R Track 312H.

Air Refueling Track

The air refueling initiation point (ARIP) is where the receiver enters the air refueling track. It serves as the first of the two points that defines the tanker orbit pattern. The receiver must be established 1,000 feet below the tanker prior to crossing the ARIP. If 1,000 feet of separation is not confirmed prior to crossing the ARIP, the receiver will hold at the ARIP.

The air refueling control point (ARCP) is the primary reference for the rendezvous. It serves as the second point that defines the tanker orbit pattern.

Navigation checkpoints will be designated in the IFG if they are required reporting points on the air refueling track. (See [Figure 1.1.](#) for an excerpt from FLIP AP/1B.) Checkpoints are usually required on longer routes or if turn points are involved. The tanker would not normally report passing these points to ARTCC on an actual air refueling route unless the tanker is in a nonradar environment.

The air refueling track terminates at the exit point. This point is also called the end air refueling point and is identified on your chart with the symbol "E A/R."
