This volume contains papers selected for presentation at the 6th IAPR Workshop on Document Analysis Systems DAS 2004 held during September 8-10 2004 at the University of Florence Italy Several papers represent the state of the art in a broad range of traditional topics such as layout analysis applications to graphics recognition and handwritten documents Other contributions address the description of complete working systems which is one of the strengths of this workshop Some papers extend the application domains to other media like the processing of Internet documents The peculiarity of this 6th workshop was the large number of papers related to digital libraries and to the processing of historical documents a taste which frequently requires the analysis of color documents A total of 17 papers are associated with these topics whereas two years ago in DAS 2002 only a couple of papers dealt with these problems In our view there are three main reasons for this new wave in the DAS community From the scientific point of view several research fields reached a thorough knowledge of techniques and problems that can be effectively solved and this expertise can now be applied to new domains Another incentive has been provided by several research projects funded by the EC and the NSF on topics related to digital libraries

Model Driven Engineering Languages and Systems Andy Schürr, Bran V. Selic, 2009-09-30. The pioneering organizers of the first UML workshop in Mulhouse, France, in the summer of 1998 could hardly have anticipated that in little over a decade their initiative would blossom into today's highly successful MODELS conference series, the premier annual gathering of researchers and practitioners focusing on a very important new technical discipline: model-based software and system engineering. This expansion is of course a direct consequence of the growing significance and success of model-based methods in practice. The conferences have contributed greatly to the heightened interest in the field, attracting much young talent and leading to the gradual emergence of its corresponding scientific and engineering foundations. The proceedings from the MODELS conferences are one of the primary references for anyone interested in a more substantive study of the domain. The 12th conference took place in Denver, USA, October 4-9, 2009, along with numerous satellite workshops and tutorials as well as several other related scientific gatherings. The conference was exceptionally fortunate to have three eminent invited keynote speakers from industry: Stephen Mellor, Larry Constantine, and Grady Booch.

The papers are organized in topical sections on image and video processing and analysis, image segmentation, image and video retrieval and indexing, pattern analysis and recognition, biometrics, face recognition, shape analysis, motion analysis and tracking, 3D image analysis, biomedical image analysis, document analysis and applications.

Probabilistic and Stochastic Methods in Analysis, with Applications J.S. Byrnes, Kathryn A. Hargreaves, Karl Berry, 2012-12-06. Probability has been an important part of mathematics

for more than three centuries Moreover its importance has grown in recent decades since the computing power now widely available has allowed probabilistic and stochastic techniques to attack problems such as speech and image processing geophysical exploration radar sonar etc all of which are covered here The book contains three exceptionally clear expositions on wavelets frames and their applications A further extremely active current research area well covered here is the relation between probability and partial differential equations including probabilistic representations of solutions to elliptic and parabolic PDEs New approaches such as the PDE method for large deviation problems and stochastic optimal control and filtering theory are beginning to yield their secrets Another topic dealt with is the application of probabilistic techniques to mathematical analysis Finally there are clear explanations of normal numbers and dynamic systems and the influence of probability on our daily lives
