Mining and Analyzing Social Networks I-Hsien Ting, Hui-Ju Wu, Tien-Hwa Ho, 2010-05-29 Mining social networks has now become a very popular research area not only for data mining and web mining but also social network analysis. Data mining is a technique that has the ability to process and analyze large amounts of data and by this to discover valuable information from the data. In recent years, due to the growth of social communications and social networking websites, data mining becomes a very important and powerful technique to process and analyze such large amounts of data. Thus, this book will focus upon Mining and Analyzing social networks. Some chapters in this book are extended from the papers that were presented in MSNDS2009, the First International Workshop on Mining Social Networks for Decision Support, and SNMABA2009, The International Workshop on Social Networks Mining and Analysis for Business Applications. In addition, we also sent invitations to researchers that are famous in this research area to contribute for this book. The chapters of this book are introduced as follows: In chapter 1, Graph Model for Pattern Recognition in Text, Qin Wu et al. present a novel approach that uses a weighted directed multigraph for text pattern recognition. In the proposed methodology, a weighted directed multigraph model has been set up by using the distances between the keywords as the weights of arcs, as well as a keyword frequency distance based algorithm. Case studies are also included in this chapter to show the performance is better than traditional means.

Analyzing Political Communication with Digital Trace Data Andreas Jungherr, 2015-06-12 This book offers a framework for the analysis of political communication in election campaigns based on digital trace data that documents political behavior, interests, and opinions. The author investigates the data-generating processes leading users to interact with digital services in politically relevant contexts. These interactions produce digital traces which in turn can be analyzed to draw inferences on political events or the phenomena that give rise to them. Various factors mediate the image of political reality emerging from digital trace data, such as the users of digital services, political interests, attitudes, or attention to politics. In order to arrive at valid inferences about the political reality on the basis of digital trace data, these mediating factors have to be accounted for. The author presents this
