**Autism: The Movement (Sensing) Perspective a Decade Later** Elizabeth B. Torres, Jonathan T. Delafield-Butt, Vikram K. Jaswal, Susan Crawford, Ashok Srinivasan, Brittany Travers, 2025-08-19 A decade ago in 2013 the Research Topic Autism the Movement Perspective proposed the radical idea that using movement and its sensations could help us better understand the many complex layers of autism spectrum disorders Inspired by earlier work from other fields the work positioned front and center

approaches from neuromotor control infusing the research with new computational ideas to study autism across the human lifespan Through the lens of motor variability as a form of kinesthetic reafference causal inference and predictive codes the Research Topic brought together a group of researchers parents practitioners and self advocates to rethink autism as sensory motor differences contributing to the emergence of powerful coping mechanisms that advanced our understanding of how the human brain develops and functions Today with new improvements in biosensing technologies and neuroscience and the embodied and affective psychology on which development is based we revisit this Research Topic approaching autism anew through a modernized lens of precision aimed at enabling socio motor agency

*Veridical Data Science* Bin Yu,Rebecca L. Barter,2024-10-15 Using real world data case studies this innovative and accessible textbook introduces an actionable framework for conducting trustworthy data science Most textbooks present data science as a linear analytic process involving a set of statistical and computational techniques without accounting for the challenges intrinsic to real world applications Veridical Data Science by contrast embraces the reality that most projects begin with an ambiguous domain question and messy data it acknowledges that datasets are mere approximations of reality while analyses are mental constructs Bin Yu and Rebecca Barter employ the innovative Predictability Computability and Stability PCS framework to assess the trustworthiness and relevance of data driven results relative to three sources of uncertainty that arise throughout the data science life cycle the human decisions and judgment calls made during data collection cleaning and modeling By providing real world data case studies intuitive explanations of common statistical and machine learning techniques and supplementary R and Python code Veridical Data Science offers a clear and actionable

guide for conducting responsible data science Requiring little background knowledge this lucid self contained textbook provides a solid foundation and principled framework for future study of advanced methods in machine learning statistics and data science Presents the Predictability Computability and Stability PCS methodology for producing trustworthy data driven results Teaches how a data science project should be conducted from beginning to end including extensive discussion of the data scientist s decision making process Cultivates critical thinking throughout the entire data science life cycle Provides practical examples and illuminating case studies of real world data analysis problems with associated code exercises and solutions Suitable for advanced undergraduate and graduate students domain scientists and practitioners

*Studying Tree Responses to Extreme Events* Achim Bräuning, Andreas Bolte, Cristina Nabais, Sergio Rossi, Ute Sass-Klaassen, 2017-06-05 Trees are among the longest living organisms They are sensitive to extreme climatic events and document the effects of environmental changes in form of structural modifications of their tissues These modifications represent an integrated signal of complex biological responses enforced by the environment For example temporal change in stem increment integrates multiple information of tree performance and wood anatomical traits may be altered by climatic extremes or environmental stress Recent developments in preparative tools and computational image analysis enable to quantify changes in wood anatomical features like vessel density or vessel size Thus impacts on their functioning can be related to climatic forcing factors Similarly new developments in monitoring cambial phenology and mechanistic modelling are enlightening the interrelationships between environmental factors wood formation and tree performance and mortality Quantitative wood anatomy is a reliable indicator of drought occurrence during the growing season and therefore has been studied intensively in recent years The variability in wood anatomy not only alters the biological and hydraulic functioning of a tree but may also influence the technological properties of wood with substantial impacts in forestry On a larger scale alterations of sapwood and phloem area and their ratios to other functional traits provide measures to detect changes in a tree s life functions and increasing risk of drought induced mortality with possible impacts on hydrological processes and species composition of plant communities Genetic variability within and across populations is assumed to be crucial for species survival in an unpredictable future world The magnitude of genetic variation and heritability of adaptive traits might define the ability to adapt to climate change Is there a relation between genetic variability and resilience to climate change Is it possible to link genetic expression and climate change to obtain deeper knowledge of functional genetics To derive precise estimates of genetic determinism it is important to define adaptive traits in wood properties and on a whole tree scale Understanding the mechanisms ruling these processes is fundamental to assess the impact of extreme climate events on forest ecosystems and to provide realistic scenarios of tree responses to changing climates Wood is also a major carbon sink with a long term residence impacting the global carbon cycle How well do we understand the link between wood growth dynamics wood carbon allocation and the global carbon cycle Papers contribution to this Research Topic will cover a wide

range of ecosystems However special relevance will be given to Mediterranean type areas These involve coastal regions of four continents making Mediterranean type ecosystems extremely interesting for investigating the potential impacts of global change on growth and for studying responses of woody plants under extreme environmental conditions For example the ongoing trend towards warmer temperatures and reduced precipitation can increase the susceptibility to fire and pests The EU funded COST Action STREeSS Studying Tree Responses to extreme Events a SynthesiS addresses such crucial tree biological and forest ecological issues by providing a collection of important methodological and scientific insights about the current state of knowledge and by opinions for future research needs
