Technologies of Ancient Egypt Christopher Dunn, 2010-06-24 A unique study of the engineering and tools used to create  
 Egyptian monuments Presents a stone-by-stone analysis of key Egyptian monuments including the statues of Ramses II and  
 the tunnels of the Serapeum Reveals that highly refined tools and mega machines were used in ancient Egypt From the  
 pyramids in the north to the temples in the south ancient artisans left their marks all over Egypt unique marks that reveal  
 craftsmanship we would be hard-pressed to duplicate today Drawing together the results of more than 30 years of research  
 and nine field study journeys to Egypt Christopher Dunn presents a stunning stone-by-stone analysis of key Egyptian  
 monuments including the statue of Ramses II at Luxor and the fallen crowns that lay at its feet His modern-day engineering  
 expertise provides a unique view into the sophisticated technology used to create these famous monuments in prehistoric  
 times Using modern digital photography computer-aided design software and metrology instruments Dunn exposes the  
 extreme precision of these monuments and the type of advanced manufacturing expertise necessary to produce them His  
 computer analysis of the statues of Ramses II reveals that the left and right sides of the faces are precise mirror images of

each other and his examination of the mysterious underground tunnels of the Serapeum illuminates the finest examples of precision engineering on the planet Providing never before seen evidence in the form of more than 280 photographs Dunn s research shows that while absent from the archaeological record highly refined tools techniques and even mega machines must have been used in ancient Egypt
