Alphard Owner Manual:

Alphard: Form and Content Mary Shaw, 2012-12-06 Alphard is a design for a programming system that supports the abstraction and verification techniques required by modern programming methodology. During the language design process we were concerned simultaneously with problems of methodology correctness and efficiency. Methodological concerns are addressed through facilities for defining new task specific abstractions that capture complex notions in terms of their intended properties without explicating them in terms of specific low level implementations. Techniques for verifying certain properties of these programs address the correctness concerns. Finally the language has been designed to permit compilation to efficient object code. Although a compiler was not implemented the research shed light on specification issues and on programming methodology. An abstraction specifying its behavior. Alphard language constructs allow a programmer to isolate publicly while localizing knowledge about its implementation. The verification of such an abstraction consists of showing that its implementation behaves in accordance with the public specification. Given such a verification the abstraction may be used with confidence to construct higher level more abstract programs. The most common kind of abstraction in Alphard corresponds to what is now called an abstract data type. An abstract data type comprises a set of values for elements of the type and a set of operations on those values. A new language construct the form provides a way to encapsulate the definitions of data structures and operations in such a way that only public information could be accessed by the rest of the program.

Computers are used in nearly all such systems. Accuracy and security are becoming increasingly essential. The design of such computer systems should make use of development methods as systematic as those used in other engineering disciplines. A systematic development method must provide a way of writing specifications which are both precise and concise. It must also supply a way of relating design to specification. A concise specification can be achieved by restricting attention to what a system has to do. All considerations of implementation details are postponed. With computer systems this is done by 1 building an abstract model of the system operations being specified by pre and post conditions 2 defining languages by mapping program texts onto some collection of objects modeling the concepts of the system to be dealt with whose meaning is understood 3 defining complex data objects in terms of abstractions known from mathematics. This last topic the use of abstract data types pervades all work on specifications and is necessary in order to apply ideas to systems of significant complexity. The use of mathematics based notations is the best way to achieve precision. 1 1 ABSTRACT DATA TYPES PROOF TECHNIQUES From a practical point of

view a solution to these three problems consists to introduce abstract data types in the programming languages and to consider formal proof methods

Using Aspect-Oriented Programming for Trustworthy Software Development Vladimir O. Safonov,2008-06-09 Learn how to successfully implement trustworthy computing tasks using aspect oriented programming This landmark publication fills a gap in the literature by not only describing the basic concepts of trustworthy computing TWC and aspect oriented programming AOP but also exploring their critical interrelationships The author clearly demonstrates how typical TWC tasks such as security checks in and out conditions and multi threaded safety can be implemented using AOP Following an introduction the book covers Trustworthy computing software engineering and computer science Aspect oriented programming and Aspect NET Principles and case studies that apply AOP to TWC Coverage includes Aspect NET the AOP framework developed by the author for the Microsoft NET platform currently used in seventeen countries The author discusses the basics of Aspect NET architecture its advantages compared to other AOP tools and its functionality The book has extensive practical examples and case studies of trustworthy software design and code using the Aspect NET framework In addition the book explores other software technologies and tools for using AOP for trustworthy software development including Java and AspectJ This book also includes a valuable chapter dedicated to ERATO the author s teaching method employed in this book which has enabled thousands of students to quickly grasp and apply complex concepts in computing and software engineering while the final chapter presents an overall perspective on the current state of AOP and TWC with a view toward the future Software engineers architects developers programmers and students should all turn to this book to learn this tested and proven method to create more secure private and reliable computing

Studies in Ada Style P. Hibbard,A. Hisgen,J. Rosenberg,M. Shaw,M. Sherman,2012-12-06 The major problems of modern software involve finding effective techniques and tools for organizing and maintaining large complex programs The key concept in modern programming for controlling complexity is abstraction that is selective emphasis on detail This monograph discusses how the Ada programming language provides ways to support and exploit such abstraction techniques The monograph is organized into two parts The first part traces the important ideas of modern programming languages to their roots in the languages of the past decade and shows how modern languages such as Ada respond to contemporary problems in software development The second part examines five problems to be programmed using Ada For each problem a complete Ada program is given followed by a discussion of how the Ada language affected various design decisions These problems were selected to be as practical as possible rather than to illustrate any particular set of language features Much of this material has appeared previously in print An earlier version of the first section by Mary Shaw was published as The Impact of Abstraction Concerns on Modern Programming Languages in the Proceedings of the IEEE special issue on Software Engineering September 1980 Vol 68 No 9 pages 1119

1130 It is reprinted with the IEEE's permission. The article has been updated to reflect the revised Ada syntax and semantics.

Formal Methods for Trustworthy Computer Systems (FM89) Karen Summerskill, Dan Craigen, 2013-11-11. The 1989 Workshop on the Assessment of Formal Methods for Trustworthy Computer Systems FM89 was an invitational workshop that brought together representatives from the research, commercial, and governmental spheres of Canada, the United Kingdom, and the United States. The workshop was held in Halifax, Nova Scotia, Canada, from July 23 through July 27, 1989. This document reports the activities, observations, recommendations, and conclusions resulting from FM89.

1.1 Purpose of Workshop

The primary purpose for holding FM89 was to assess the role of formal methods in the development and fielding of trustworthy critical systems. The need for this assessment was predicated upon four observations:

1. Critical systems are increasingly being controlled by computer systems.
2. Existing techniques for developing, assuring, and certifying computer-based critical systems are inadequate.
3. Formal methods have the potential for playing the same role in the development of computer-based systems as applied mathematics does for other engineering disciplines.
4. Formal methods have had limited impact on the development of computer-based systems and supporting technologies.

The goal of the workshop was to complete the following tasks:

1. Assess the problems retarding the development of trustworthy critical systems.
2. Determine the potential impact of applying formal methods techniques to the development of trustworthy critical systems.
3. Determine the research and development required to facilitate a broader application of formal methods techniques.
