

CHAPTER 7

NERVOUS SYSTEM

**NERVOUS SYSTEM – command center of the body; it regulates function of the organs composing of the different systems in the body. Central System of the body.*

What is the nervous system?

The nervous system consists of two divisions: the **central nervous system** containing the brain and spinal cord, and the **peripheral nervous system** which is a network of nerves and neural tissues branching out throughout the body.

***CNS**

- Brain, protected by the skull/cranium
- Spinal Cord, protected by the spinal column/vertebral column

FUNCTION OF THE NERVOUS SYSTEM has something to do with **responding to stimuli so we could do specific function as we feel the stimuli. (like a closed circuit)*

***CELLS OF THE NERVOUS SYSTEM –**

Neurons, nerve cells (one of the biggest cells in the body)

Neurons are the nerve cells, the structural and functional units of the nervous system.

Impulses - its internal and external environments. There are various types of neurons.

Neuroglia (nur ROH glee ah).

TYPES OF NEURONS

1. MOTOR NEURONS

The motor neurons usually have one axon and several dendrites. The axon is covered with an insulating fatty layer called a myelin sheath. Dendrites are short and unmyelinated.

Motor neurons cause **muscle contractions** and **control secretions** from glands and organs... controlling body functions.

2. SENSORY NEURONS

Sensory neurons do not have true dendrites. They are attached to sensory receptors and transmit impulses to the central nervous system, which then stimulate the interneurons, and then motor neurons.

Interneurons are located entirely within the central nervous system. They intercept the impulses from the sensory neurons and transmit the signals to the motor neurons.

Ex. Hot environment > Nerve receptors will sense the warmth/heat before the brain > Interneurons(bridge) will activate response > Motor Neurons (will drink water, turn A/C on, use a fan)

HOW DO DENDRITES COMMUNICATE???

- **Synapses** (Space Connections)
- The number of synapses influences transmission(information)

Ross and Wilson Applied Anatomy and Applied Physiology in Health and Illness_1SAE - E-Book W.M.S. Johnson, Priscilla Johnson, S.J. Nalini, 2022-11-01 Ross and Wilson Applied Anatomy and Applied Physiology in Health and Illness_1SAE E Book **Hearing** Age R. Moller, 2000-05-25 There is a new trend in the education of audiologists that emphasizes the basics of hearing Hearing Its Physiology and Pathophysiology addresses this trend It covers not only the basics of hearing but also the basics of pathophysiology which is not covered in a comprehensive way in any other text today This book recognizes the fact that

the diseased auditory system does indeed function but in a different way than the normal system Few books have addressed the pathophysiology of the ear and the auditory nervous system Most books on hearing begin with a detailed description of the physics of sound which scares many readers away because they believe they need to understand acoustics to understand how the ear functions Hearing Its Physiology and Pathophysiology does not assume that the readers are physicists which would be analogous to assuming that visual physiologists would need to know quantum mechanics to understand how the visual nervous system functions This book provides a thorough understanding of the anatomy and function of the auditory system To the basic scientist it will provide an understanding of the auditory system and how it works To the clinician it will provide insight into the normal and diseased auditory system **The Anatomy and Physiology Learning System** Edith J. Applegate,2000 This popular text takes a dynamic and accessible approach to a complex and often intimidating subject Colorful and eye catching it cuts straight to the basics readers need to know emphasizing medical terminology and clinical applications in an easy to grasp fashion 595 illustrations 280 in full color make anatomy and physiology come alive
