Vincenot,Stefano Mazzoleni,Lael Parrott,2017-01-11 Systems studied in environmental science due to their structure and the heterogeneity of the entities composing them often exhibit complex dynamics that can only be captured by hybrid modeling approaches While several concurrent definitions of hybrid modeling can be found in the literature it is defined here broadly as the approach consisting in coupling existing modelling paradigms to achieve a more accurate or efficient representation of systems The need for hybrid models generally arises from the necessity to overcome the limitation of a single modeling technique in terms of structural flexibility capabilities or computational efficiency This book brings together experts in the field of hybrid modelling to demonstrate how this approach can address the challenge of representing the complexity of natural systems Chapters cover applied examples as well as modeling methodology

Modeling Microbial Responses in Food Robin C. McKellar,Xuwen Lu,2003-12-29 The first state of the art review of this dynamic field in a decade Modeling Microbial Responses in Foods provides the latest information on techniques in mathematical modeling of microbial growth and survival The comprehensive coverage includes basic approaches such as improvements in the development of primary and secondary models statistical *Biophysically based Computational Models of Astrocyte ~ Neuron Coupling and their Functional Significance* John Wade,Scott Kelso,Vincenzo Crunelli, Liam J. McDaid, Jim Harkin,2014-03-21 Neuroscientists are increasingly becoming more interested in modelling brain functions where capturing the biophysical mechanisms underpinning these functions requires plausible models at the level of neuron cells However cell level models are still very much in the embryo stage and therefore there is a need to advance the level of biological realism at the level of neurons synapses Recent publications have highlighted that astrocytes continually exchange information with multiple synapses if we are to fully appreciate this dynamic and coordinated interplay between these cells then more research on bidirectional signalling between astrocytes and neurons is required A better understanding of astrocyte neuron cell coupling would provide the building block for studying the regulatory capability of astrocytes networks on a large scale For example it is believed that local and global signalling via astrocytes underpins brain functions like synchrony learning memory and self repair This Research Topic aims to report on current research work which focuses on understanding and modelling the interaction between astrocytes and neurons at the cellular level Bottom up and at network level Top down Understanding astrocytic regulation of neural activity is crucial if we are to capture how information is

represented and processed across large neuronal ensembles in humans
